STANDARD ST.32

RECOMMENDATION FOR THE MARKUP OF PATENT DOCUMENTS USING SGML (STANDARD GENERALIZED MARKUP LANGUAGE)

*Revision adopted by the PCIP Executive Coordination Committee
at its seventeenth session on November 24, 1995*

INTRODUCTION

1. This Recommendation is an application of International Standard ISO 8879:1986, *Information Processing - Text and Office Systems - Standard Generalized Markup Language (SGML)*; which is under review.
2. This Recommendation provides for the exchange of patent documents in machine-readable form on any exchange medium in a hardware-, software- and layout-independent format. Such independence of the representation of the contents of a document from their intended uses is achieved by using International Standard ISO 8879:1986, *Information processing - Text and office systems - Standard Generalized Markup Language (SGML)*, to define generic identifiers which are in turn used to mark the logical structure of each patent document.
3. International Standard ISO 8879:1986 cannot be used *per se* as the basis for document processing. That is not the intention of the standard. Instead, ISO 8879 "standardizes the application of generic coding and generalized markup concepts. It provides a coherent and unambiguous *syntax* for describing whatever a user chooses to identify within a document" (ISO 8879:1986 page 2). The choice of tags, that is, the *semantics* to which the syntax applies, is left to the user.
4. Therefore, this Recommendation defines generic identifiers or "tags" for marking the logical elements of a patent document. The logical elements of a patent document are of two types: common text and patent-specific content.
5. Under the terms of International Standard ISO 8879:1986 any tags may be used in a particular document so long as the semantics are defined in an accompanying document type definition (DTD). It is conceivable that a patent issuing authority may choose different tags than those specified in this Recommendation. So long as the tags were defined in the accompanying DTD, the document could be presented to a user on a system designed to read SGML documents. However, documents which use a DTD that differs from that specified below cannot be considered to be in compliance with this Recommendation even if they are in compliance with ISO 8879:1986.
6. Markup in compliance with this Recommendation is independent of layout and formatting. Decisions regarding layout and formatting must be made at the time a document is presented for reading, either on a display screen or on paper. It is at the time of presentation that, for example, text which has been marked as emphasized (bold, italic, etc.) is rendered in an available font which has more or

HANDBOOK ON INDUSTRIAL PROPERTY INFORMATION AND DOCUMENTATION

Ref.: Standards -- ST.32

page: 3.32.2

less the desired appearance. It is at the time of presentation that the size of the display page (screen or paper) is determined. Many such decisions which map the generic identifiers in a document to the capabilities of a particular physical display device (whether screen or paper) determine, for example, how many characters will fit on one line or how much text will fit on a display page. As a result, the document may not have exactly the same physical appearance when it is presented on different display devices. This Recommendation does not address issues concerned with mapping generic identifiers to a particular display device. It can be expected that in the future two standards may be applied in this area: Standard Page Description Language (SPDL) ISO/IEC DIS 10180 and Document Style Semantics and Specification Language (DSSSL) ISO/IEC DIS 10179.

7. Markup in compliance with this Recommendation should facilitate importing large sets of documents into a database. In fact, the extensive list of tags for patent bibliographic data will make it possible for database vendors to more easily distinguish various information elements with higher precision than has been possible in the past. This Recommendation does not address issues concerned with mapping generic identifiers to database fields.
8. This revision of ST.32 shall be referenced as version 3 (1995). This is to distinguish it from previous versions, which may still be used for data exchange but, if so, **must** be referenced as: version 1 (October 1987) or version 2 (September 1990). The relevant DTD may then be applied to a specific version for processing, parsing, etc. In addition it is possible to reference the DTD to be used as an attribute to any patent document, the default being the latest version of ST.32. It is, of course, recommended to update files to this latest version of ST.32 for data exchange.

DEFINITIONS

9. The expression **patent document** includes patents for invention, plant patents, design patents, utility certificates, utility models, documents of addition thereto and published applications therefor. (Refer also to WIPO ST.16: *Recommended Standard Code for the Identification of Different Kinds of Patent Documents*)
10. **Common text** refers to logical elements that could occur in any type of industrial property information or in any kind of document, for example, paragraphs, footnotes, subscripts, special characters, lists, embedded images, tables, chemical formulae, mathematical formulae, etc. Tags for common text data are specified and described in Part 1(the DTD is in Annex B).

HANDBOOK ON INDUSTRIAL PROPERTY INFORMATION AND DOCUMENTATION

Ref.: Standards -- ST.32

page: 3.32.3

11. **Patent-specific content** refers to logical elements that ordinarily occur only in patent documents, for example, inventor's name, patent number, issuing authority, priority data, classification symbols, etc. In short, any of the information elements identified in WIPO Standard ST.9, *Recommendation Concerning Bibliographic Data on and Relating to Patents and SPCs*, as well as some others. Tags for patent bibliographic data are specified and described in Part 2 (the DTD is in Annex B).
12. **Markup** is defined as text that is added to the content of a document and that describes the structure and other attributes of the document in a non-system-specific manner, independently of any processing that may be performed on it. Markup includes document type definitions (DTDs), entity references, and descriptive markup (tags).
13. A **document type definition (DTD)** formally defines:
 - the names of all the logical elements that are allowed in documents of a particular type;
 - how often each logical element may appear;
 - the permissible contents for each logical element;
 - attributes (parameters) that may be used with each logical element;
 - the correct sequence of logical elements;
 - the names of all external and pre-defined entities that may be referenced in a document;
 - the hierarchical structure of a document;
 - the features used from the SGML standard.A DTD defines the vocabulary of the markup for which SGML defines the syntax. The complete set of tags that may be found in a particular document are listed and formally defined in its DTD which must accompany the document. Each document in a large set of documents which share the same DTD, that is, documents which are of the same type, usually incorporates the DTD by reference.
14. An **entity** is content that is not part of the text stream in a document but which is incorporated into the text stream by reference to its name. In patent documents, for example, images are external entities. Entity references can also be used to code instances of characters not found in the 'declared' character set (see Character Sets below).
15. **Tags** define a document's logical structure by labelling elements of the document's content using the generic identifiers declared in the DTD.

HANDBOOK ON INDUSTRIAL PROPERTY INFORMATION AND DOCUMENTATION

Ref.: Standards -- ST.32

page: 3.32.4

16. The **hierarchy** of SGML tags used in this Recommendation follows the general structure of a patent document. The level in the hierarchy is indicated by the appropriate SGML tag describing a generic logical element. A generic logical element is a component of the text such as the entire document, a specific sub-document, a paragraph, a list, etc. Each generic logical element is described by a start tag and end tag.

<i>level</i>	<i>sgml tag (example)</i>
Document	<PATDOC>
. Sub-document	<SDOXX>
. . Text Component (Paragraph)	<P>
. . . Text Element (Subscript)	<SB>
. . . Character	
. . . End	</SB>
. . End	</P>
. End	</SDOXX>
End	</PATDOC>

17. International Standard ISO 8879:1986 defines an **abstract syntax** and a **reference concrete syntax**. The reference concrete syntax for SGML tags is as follows:

	Start Tag		End Tag
This is		text	

that will appear emphasized as bold ...

Where

- < is the opening delimiter for Start Tags (1 character)
- </ is the opening delimiter for End Tags (2 characters)
- > is the closing delimiter for both Start Tags and End Tags (1 character)
- B is the generic identifier of this particular tag, defined in the DTD

A generic identifier is a name that identifies a generic logical element. The text between the start tag and the end tag is a specific instance of the generic logical element. Depending upon the generic identifier, parameters may be required. In the description of the various tags in this Recommendation, parameters are referred to as "attributes" in conformance with ISO practice. For an explanation of the relationship between reference concrete syntax and abstract syntax, see International Standard ISO 8879:1986.

HANDBOOK ON INDUSTRIAL PROPERTY INFORMATION AND DOCUMENTATION

Ref.: Standards -- ST.32

page: 3.32.5

18. The following is a brief example of SGML markup:

```
<PATDOC>
<SDOBI LA=EN>
<B100> (Minimum bibliographic tags would need to be added here)
</SDOBI>
<SDODE LA=EN>
<H LVL=0>FABRIC SOFTENER COMPOSITION</H>
<H LVL=1>TECHNICAL FIELD</H>
...
<H LVL=1>SUMMARY OF THE INVENTION</H>
<P N=11>The present invention relates to an aqueous fabric softener composition comprising:
<SL>
<LI>(A) from 1% to 50% by weight of ... cyclic amines of the formula
<EMI FILE="92102108" ID="2.1" HE=30 WI=55 TI=CF>
wherein n is 2 or 3, R<SB>1</SB> and
...
<LI>(B) from 3% to 20% by weight of (A)
...
</SL>
</SDODE>
</PATDOC>
```

In the example above <EMI FILE="92102108" ID="2.1" HE=30 WI=55 TI=CF> refers to a chemical structure which has been scanned as an image and which will be imbedded in the text at this point at the time of presentation. <PATDOC> and </PATDOC> mark the beginning and end of a patent respectively. The other tags in the example are explained below and there are more extensive examples in Annex D.

CHARACTER SETS

19. The data content of the majority of documents, including patents, consists of data characters. The data characters could be in any language consisting of many types of character ('character' is used in its broadest sense here to include graphical symbols). In this recommendation only one coded character set is referenced: ISO 646. This is probably the most common **system independent** character set in use today. Characters not in this code set should be represented by public entity references - preferably those contained in ISO 8879 - these are referenced in the DTD in Annex B. Note that other character sets and character entity references are possible. It is not recommended to use the code pages contained in WIPO ST.31 since these can lead to problems in data interchange, are not easily maintained and are not as commonly used and accepted as the ISO 646 code page.

REFERENCES

REQUIREMENTS OF THE RECOMMENDATION

22. Documents which conform to this Recommendation shall be marked up in conformance with:
 - International Standard ISO 8879:1986, Information Processing - Text and Office Systems - Standard Generalized Markup Language (SGML);
 - the DTD contained in Annex B.
23. Documents which conform to this Recommendation shall use the *reference concrete syntax* defined in International Standard ISO 8879:1986. See also Annex A: *SGML Declaration for Patent Documents*.
24. The DTD contained in Annex B shall be provided separately from the individual documents in the collection of documents to which it applies.
25. Each document to which the DTD in Annex B applies will incorporate the DTD by reference.
26. Reference to the DTD contained in Annex B shall be made by use of its "public name" which has been [will be] registered with the appropriate international authority and is declared below in Annex B.
27. No document in conformance with this Recommendation shall refer to or incorporate by reference a DTD 1) for which a public name has not been registered with the appropriate international authority; 2) which does not appear in this Recommendation.
28. It may happen that some particularly unusual document contains some text or image portion(s) which cannot be rendered for the end user with adequate fidelity, in the judgement of the issuing authority, without the introduction of one or more logical elements not contained in Annex B. In that event:

HANDBOOK ON INDUSTRIAL PROPERTY INFORMATION AND DOCUMENTATION

Ref.: Standards -- ST.32

page: 3.32.8

- 28.1. The issuing authority shall provide constructive notice to end users that some documents contain exceptional elements. Where possible, the exact identification of such documents shall be provided, either as a list of document numbers or contiguous ranges of document numbers.
- 28.2. The issuing authority shall make every attempt to have the required logical element(s) introduced into the appropriate DTD contained in the appropriate section of this Recommendation, so that other issuing authorities may take advantage of them, and so that presentation system vendors may take account of them in preparing presentation software and hardware.
- 28.3. The issuing authority may, at its discretion, include the required logical element(s) in a supplementary DTD which is incorporated by reference into the DTD(s) that apply to the document(s) in question until such time as the elements are incorporated into this Recommendation.
 - 28.3.1. A supplementary DTD shall not be incorporated directly into the document(s) to which it applies.
 - 28.3.2. A supplementary DTD shall not contain any duplicate logical elements included in the DTD contained in ST.32, Annex B.
 - 28.3.3. If a supplementary DTD is provided, constructive notice shall be given to the end user to that effect.

HANDBOOK ON INDUSTRIAL PROPERTY INFORMATION AND DOCUMENTATION

page: 3.32.9

PART 1: SGML MARKUP FOR COMMON TEXT

The tags described in this part of ST.32 indicate text portions that are not specific to any one type of industrial property information and may therefore be used in any document conforming to ST.32.

GENERAL TEXT

TABLE OF SGML TAGS

TAG	NAME	DESCRIPTION
	Bold	Indicates the beginning of text to be highlighted at the time of presentation by using a bold typestyle. An end tag is required.
<BAI>	BAIkaku	Indicates Japanese text portion to be highlighted using an expanded font. An end tag is required.
<BCHG>	Beginning of a CHanGe	Indicates the beginning of a change in bibliographic data only. Attributes required. It is an empty element which should be followed by <ECHG>.
 	line BReak	Indicates the position in the text at which a line break occurs. No end tag is necessary.
<CHF>	CCharacter Fraction	Indicates a character construct consisting of two or more characters in a 'fraction type' construct. Use with the <CHFBR> tag. An end tag is required.
<CHFBR>	CCharacter Fraction BReak	Indicates the break point in a character 'fraction' construct consisting of two or more characters in a 'fraction type' construct. No end tag is necessary.
<CHG>	CHanGe	Indicates the beginning of a change (not in bibliographic data). Attributes required. An end tag is required
<DP>	Document Page	Indicates the beginning of a new page. The attribute N= is required. No end tag is necessary.
<ECHG>	End of a CHanGe	Indicates the end of a change in bibliographic data only. Attributes required. It is an empty element which should be preceded by <BCHG>.
<FLA>	FLoating Accents	This indicates a character enhanced with a particular attributing feature. An end tag is required.
<FLAC>	FLoating ACCents	This indicates the attributing feature in a floating accent construct. No end tag is necessary.
<FOO>	FOOtnote	Indicates a footnote. Attributes required. An end tag

HANDBOOK ON INDUSTRIAL PROPERTY INFORMATION AND DOCUMENTATION

Ref.: Standards -- ST.32

page: 3.32.10

TABLE OF SGML TAGS

TAG	NAME	DESCRIPTION
		is required.
<FOR>	FOotnote Reference	Indicates a reference to a previous footnote. Attributes required. An end tag is required.
<H>	Heading level	Indicates a separate text portion that precedes text parts, for example, paragraphs. An end tag is required.
<HAN>	HANKaku	Indicates Japanese text portion to be highlighted using a compressed font. An end tag is required.
<i>	Italic	Indicates the beginning of text to be highlighted at the time of presentation by using an italic typestyle. An end tag is required.
<LTL>	LiTeraL	Indicates the beginning of text in which the space, indents, line endings, etc., should be preserved as keyed in the original document. An end tag is required.
<O>	'Over' embellishments	Indicates the beginning of text to be covered by an over, or mid, embellishment of a particular designated style (attribute) at the time of presentation. An end tag is required.
<P>	Paragraph	Indicates a text portion known as a paragraph and implies that the text will begin on a new line. No end tag is necessary.
<PATDOC>	PATent DOCument	Indicates the beginning of a patent document instance (file). An end tag is required.
<PC>	Paragraph Continuation	Indicates a continuation of an interrupted paragraph. No end tag is necessary.
<PCL>	Page CoLumn	Indicates the beginning of a new column. The attribute N= is required. No end tag is necessary.
<PLN>	Page LiNe	Indicates the beginning of a new line. The attribute N= is required. No end tag is necessary.
<SB>	SuBscript	Indicates the beginning of text which is to be placed as a subscript to the preceding text outside mathematical formulae. An end tag is required.
<SDOxx>	Sub-DOcument	Indicates the beginning of a sub-document whose identity (xx) is included in the tag. An end tag is recommended.
<SP>	SuPerscript	Indicates the beginning of text which is to be placed as a superscript to the preceding text outside mathematical formulae. An end tag is required.

page: 3.32.11

TABLE OF SGML TAGS		
TAG	NAME	DESCRIPTION
<TXF>	TeXt Frame	This indicates a rectangular area of text of a page. No end tag is necessary.
<U>	Under embellishment	Indicates the beginning of text to be highlighted with an under embellishment of a particular style (attribute) at the time of presentation. An end tag is required.

HANDBOOK ON INDUSTRIAL PROPERTY INFORMATION AND DOCUMENTATION

Ref.: Standards -- ST.32

page: 3.32.12

TABLE OF ATTRIBUTES

ATTRIBUTE	NAME	DESCRIPTION
ALIGN	ALIGN	Alignment of data.
CY	CountrY code	Indicates country code based on ST.3
DATE	DATE	Date : in the format YYYYMMDD
DNUM	Document Number	Identifier of document (publication or application number)
DTD	Document Type Definition	Version number of the DTD.
FILE	File name	The file name of a patent document or image file.
FN	Footnote Number	Unique identification for a footnote
FNREF	Foot Note REference	Unique identification for a footnote reference
FONT	FONT	Font used in text frames
FR	FRame	Frame number within a page
HE	HEight	Height of images in mm
ID	IDentifier	Has various parameters depending on tag
KIND	KIND	Kind of document based on ST.16
LA	LAnguage	Indicates sub-document language
LS	Line Spacing	Line spacing in text frames
LVL	LeVeL	Indicates the level of a heading
LX	X coordinate	X coordinate of image in 1/10mm
LY	Y coordinate	Y coordinate of image in 1/10mm
N	Number	Indicates numbers for paragraphs, pages, etc.
POS	POSITION	Indicates various parameters depending on the tag
SIZE	SIZE	Font size in text frames
STATUS	STATUS	Indicates status of patent document and/or change
STYLE	STYLE	Indicates the style of various attributes, for example, over characters, etc.
TYPE	TYPE	Type of embellishment
WI	WIdth	Width of images in mm

HANDBOOK ON INDUSTRIAL PROPERTY INFORMATION AND DOCUMENTATION

page: 3.32.13

SGML TAGS: DESCRIPTION AND USAGE

DOCUMENT STRUCTURE

1. <PATDOC> : PATent DOCument

This is the mandatory identifier with which every patent document must start. An end tag is required.

Required Attribute(s):

None.

Optional Attribute(s):

FILE=name Where 'name' is the name of the patent document file, which contains the document instance.

STATUS= Status of the patent document, eg. contains changes, republished, deleted, withdrawn, etc.

Note: It is recommended that the following optional attributes should be used **only** when the mandatory tags, giving document identification, contained in the <SDOBI> sub-document, are not used. This may be the case, for example, when only partial information is exchanged between offices.

CY=xx Where xx is the country or organisation, according to WIPO ST.3, publishing or issuing the patent document. <B190>

DATE=YYYYMMDD Date of publication. <B140>

DNUM=n Where n is the document number, usually the publication number but may also be the application number. <B110> or <B210>

KIND=xx Where xx is the kind of patent document code taken from WIPO ST.16. <B130>

DTD=n Where n is the version number of the DTD applied to a particular patent document. The default is ST.32 Version 3 (1995).

DTD Syntax:

```
<!ELEMENT patdoc - -      (sdoobi,(sdoab*&sdoode?&sdocl*&sododr?&sdosr?))  
>          +(%floats;)      --  
<!ATTLIST patdoc cy      CDATA  #IMPLIED    -- Country, organis. St.3      --  
          dnum      CDATA  #IMPLIED    -- Identification number      --  
          date      NUMBER #IMPLIED   -- date of publication      --  
          file      CDATA  #IMPLIED    -- file identification      --  
          kind      CDATA  #IMPLIED    -- Kind of patent St.16      --  
          status     CDATA  #IMPLIED    -- Status of the patent doc.      --  
          dtd       NUTOKEN #IMPLIED   -- Version NUMBER of DTD      -->
```

HANDBOOK ON INDUSTRIAL PROPERTY INFORMATION AND DOCUMENTATION

Ref.: Standards -- ST.32

page: 3.32.14

Examples:

```
<PATDOC><SDOBI>Here is a WIPO Patent Document (other tags would normally be included)</SDOBI></PATDOC>
<PATDOC FILE=92101123 CY=EP DATE=19921212 DNUM=0500111 KIND=A1>
<SDOBI>Here is a European Patent Office application with a search report (A1) (other tags would normally be included)</SDOBI></PATDOC>
```

2. <SDOxx> : Sub-DOcument tags

This is the mandatory identifier with which every sub-document must start. An end tag, although optional, is recommended.

Where xx = sub-document identifier

Possible sub-documents are:

<SDOAB>	ABstract
<SDOBI>	Bibliographic data
<SDOCL>	CLaims
<SDODE>	DEscription
<SDODR>	DRawings
<SDOSR>	Search Report

Required Attribute(s):

None.

Optional Attribute(s):

CY=country code	Indicates the country where the sub-document "CLAIMS" especially relate to, abbreviated in accordance with WIPO Standard ST.3 country code.
LA=language code	Indicates language of the sub-document in accordance with International Standard ISO 639:1988.
STATUS=	Status of the patent sub-document, eg. contains changes, republished, deleted, withdrawn, etc.

DTD Syntax:

```
<!ELEMENT sdoabi - o (B000?,B100,B200?,B300?,B400?,B500?,B600?,B700?,B800?,
B900?) +(bchg|echg) -- Bibliographic data -->
<!ELEMENT sdoab - o ((h|p|pc|%img;)+) -- Abstract -->
<!ELEMENT sdodr - o (emi+) -- Drawings -->
<!ELEMENT sdode - o (h|p|pc|%img;)+ -- Description -->
<!ELEMENT sdocl - o (h|p|%lst;)+ -- Claims -->
<!ELEMENT sdosr - o ((B510?,B520?,B560?,B580?)|(emi)+) -- Search report -->
<!ATTLIST (sdoabi|sdoab|sdode|sdocl|sdodr|sdosr)
           la NAME #IMPLIED -- language(ISO 639) --
           cy NAME #IMPLIED -- country code --
           status CDATA #IMPLIED -- Status of the sub-doc. -->
```

HANDBOOK ON INDUSTRIAL PROPERTY INFORMATION AND DOCUMENTATION

Ref.: Standards -- ST.32

page: 3.32.15

Examples:

```
<SDOBI>
<B500><B542>Here is bibliographic data - it should contain other tags also</B500>
</SDOBI>
<SDOCL LA=F>
<OL>
<LI>Dispositif de reséquencement (RU) pour un noeud d'un système de commutation de
cellules, chaque cellule étant constituée d'un nombre variable de sous-cellules ayant une
longueur fixe, ce noeud comportant ....
<LI> ...
</OL>
</SDOCL>
```

```
<SDOAB LA=D>
<P>Die vorliegende Erfindung betrifft Impfstoffe auf Basis von Bovinen Herpesviren des
Typs 1 (BHV-1) die Änderungen in Bereichen ihres Genoms enthalten, die für
nicht-essentielle Teile essentieller Proteine kodieren. Mit Hilfe dieser Impfstoffe können
geimpfte von nicht-geimpften Rindern unterschieden werden. Die Erfindung betrifft ferner
Verfahren zur Isolierung und Herstellung der geänderten BHV-1 Stämme, Isolierung und
Herstellung der geänderten Proteine und Peptide.
</SDOAB>
```

```
<SDOCL LA=D CY=AT>
<OL>
<LI>Mikroorganismus DSM 7329 und DSM 7330.
<LI>Verfahren zur Herstellung von L- $\alpha$ -Aminosäuren durch enzymatische Umsetzung eines
D-, L- und/oder D,L-5-monosubstituierten Hydantoins und/oder einer D-, L- und/oder
D,L-N-Carbamoyl- $\alpha$ -aminosäure,<BR> ...
</OL>
</SDOCL>
```

HANDBOOK ON INDUSTRIAL PROPERTY INFORMATION AND DOCUMENTATION

Ref.: Standards -- ST.32

page: 3.32.16

3. <CHG> : CHanGe

This indicates data which has been 'changed' (it could also indicate the original text). An end tag is required.

Required Attribute(s):

DATE=YYYYMMDD Indicates the date on which the text was changed.

STATUS= Indicates the status of the change, the value of this attribute has been left open but one letter codes are recommended, eg. A = amended text, D = deleted text, O = Original text.

Optional Attribute(s):

None

DTD Syntax:

```
<!ELEMENT chg   - - (h|p|pc|(%ptext;))*          -- Change text           -->
<!ATTLIST chg date    NUMBER      #REQUIRED    -- Date of change text  --
               status   CDATA       #REQUIRED    -- Status of the change  -->
```

Example:

```
<P><CHG DATE=19950321 STATUS=A>This data was amended on 21 March 1995</CHG>
```

4. <BCHG> : Beginning of a CHanGe

This indicates bibliographic data which has been 'changed' (it could also indicate the original text). It is an empty element - it should be followed by <ECHG>.

Required Attribute(s):

DATE=YYYYMMDD Indicates the date on which the text was changed.

STATUS= Indicates the status of the change, the value of this attribute has been left open but one letter codes are recommended, eg. A = amended text, D = deleted text, O = Original text.

Optional Attribute(s):

None

DTD Syntax:

```
<!ATTLIST bchg date    NUMBER      #REQUIRED    -- Date data changed   --
               status   CDATA       #REQUIRED    -- Status of the change -->
```

HANDBOOK ON INDUSTRIAL PROPERTY INFORMATION AND DOCUMENTATION

Ref.: Standards -- ST.32

page: 3.32.17

Example:

```
<B235><BCHG DATE=19960321 STATUS=A><DATE>19960321</DATE><ECHG></B235>
```

5. <ECHG> : End of CHanGe

This indicates the end of data which has been 'changed' in bibliographic data (it could also indicate the original text). It is an empty element - it should be preceded by <BCHG>.

Required Attribute(s):

None

Optional Attribute(s):

None

DTD Syntax:

```
<!ELEMENT echg - o EMPTY -- End of changed bibliographic data -->
```

Example:

```
<B235><BCHG DATE=19960321 STATUS=A><DATE>19960321</DATE><ECHG></B235>
```

HANDBOOK ON INDUSTRIAL PROPERTY INFORMATION AND DOCUMENTATION

Ref.: Standards -- ST.32

page: 3.32.18

6. <H> : Headings

This indicates levels of headings which may be treated differently. An end tag is required.

Required Attribute(s):

None.

Optional Attribute(s):

ALIGN= Indicates the alignment of the header which may be centre, left, right - left is the default.

DTD Syntax:

```
<!ELEMENT h      - - (%ptext;)+      -- Header      -->
<!ATTLIST h    lvl NUMBER #IMPLIED   -- Header level --
               align (%align;) "left"  -- alignment -->
```

Examples:

<H>This is a default heading</H>

<H LVL=0>This is the title heading</H>

<H LVL=1>This is a sub-section heading</H>

HANDBOOK ON INDUSTRIAL PROPERTY INFORMATION AND DOCUMENTATION

Ref.: Standards -- ST.32

page: 3.32.19

7. <P> : Paragraphs

This indicates a text portion commonly known as a paragraph. No end tag is necessary.

Required Attribute(s):

None.

Optional Attribute(s):

N=nnnnnn Consisting of a 6-digit sequence number indicating every paragraph in a document or sub-document. Leading zeros may be dropped.

ALIGN= Indicates the alignment of the paragraph which may be centre, left, right - left is the default.

Example:

<P>First text paragraph . <P>Second text paragraph.

<P N=1>First text paragraph.<P N=2>Second text paragraph.

DTD Syntax:

```
<!ELEMENT p      - o (%ptext;)+          -- Paragraph elements  -->
<!ATTLIST p     n      NUMBER #IMPLIED    -- Reference number   --
                  align (%align;) "left"           -- alignment        -->
```

HANDBOOK ON INDUSTRIAL PROPERTY INFORMATION AND DOCUMENTATION

Ref.: Standards -- ST.32

page: 3.32.20

8. <PC> : Paragraph Continuation

This indicates an interruption in a paragraph, for example, by a figure, table, etc. The existing paragraph should be continued. No end tag is necessary.

Required Attribute(s):

None

Optional Attribute(s):

None

DTD Syntax:

```
<!ELEMENT pc      - o (%ptext; ;)+           -- Paragraph continuation      -->
```

Example:

```
<P N=12>Here starts a new text paragraph, it contains an EMI:  
<EMI ID='2.1' HE=10 WI=20 TI=CF>  
<PC>and continues without paragraph formatting ...
```

9.
 : Break

This indicates a line break in general text. No end tag is necessary. Whether and how the break tag is interpreted at the time of presentation is not specified in this Recommendation. Note that this tag should not be used in mathematical formulae where <BREAK> is used.

Required Attribute(s):

None

Optional Attribute(s):

None

DTD Syntax:

```
<!ELEMENT br      - o EMPTY                -- Line break      -->
```

HANDBOOK ON INDUSTRIAL PROPERTY INFORMATION AND DOCUMENTATION

Ref.: Standards -- ST.32

page: 3.32.21

Example:

This line must break here
and also break here
but that's all for this paragraph.

<P>This line must break here
and
also break here
but that's all for this
paragraph.

Note: the above example assumes that the break tag is interpreted at the time of presentation as forcing a line break in the text. Other interpretations are possible.

10. <FOO> : FOOnotes

This tag identifies a text portion which is the contents of a footnote. The footnote should be inserted in the text stream at the point where it is first referred to. The presentation software will cause the footnote to appear, usually, at the bottom of the page. An end tag is required.

Required Attribute(s):

FN=nnnn.nn

Consisting of a 4-digit sequence number indicating the page number of the original document on which the footnote occurred and a 2-digit sequence number indicating the sequence of footnotes on that particular page. Optionally, it may be replaced by a sequential numbering of footnotes within a document, in which case use FN=nnnnnnn. Either form is valid. It must be a unique reference in the document. Leading zeros may be dropped.

Optional Attribute(s):

None

DTD Syntax:

```
<!ELEMENT foo    - - (%ptext ; )+          -- Footnotes           -->
<!ATTLIST foo   fn   NUTOKEN   #REQUIRED      -- Footnote id.        -->
```

Example:

... text *<FOO FN='10.1'>* This is the text of the footnote - to be placed at the foot of a page - note that the asterisk "*" is also part of this footnote</FOO>

Note: The indicator, in this case "*", is NOT inserted by application software, as is normal, because in patent documentation it is often not possible to change data submitted by a patent applicant.

HANDBOOK ON INDUSTRIAL PROPERTY INFORMATION AND DOCUMENTATION

Ref.: Standards -- ST.32

page: 3.32.22

11. <FOR> : FOotnote Reference

This indicates from which point(s) in a document a footnote is referenced. An end tag is required.

Required Attribute(s):

FNREF=nnnn.nn Consisting of a 4-digit sequence number indicating the original page number on which the footnote occurred and a 2-digit sequence number indicating the sequence of footnotes on that particular page. This attribute should contain exactly the same value as the attribute of the referenced footnote (FN=). Optionally, it may be replaced by a sequential numbering within a document, in which case use FNREF=nnnnnn. Either form is valid. Leading zeros may be dropped.

Optional Attribute(s):

None

DTD Syntax:

```
<!ELEMENT for      - - (%ptext;)+          -- Footnote reference      -->
<!ATTLIST for    fnref    NUTOKEN #REQUIRED   -- Footref id.           -->
```

Example:

```
text<FOR FNREF='10.1'>*</FOR> ...
```

Note: At the time of presentation this should result in the SAME footnote as first appeared on page 10 of the original document being produced on the page where <FOR> is used. This may occur, for example, if there is a page break during processing between the two footnote references which were originally on the same page.

HANDBOOK ON INDUSTRIAL PROPERTY INFORMATION AND DOCUMENTATION

Ref.: Standards -- ST.32

page: 3.32.23

TEXT 'HIGHLIGHTING' MARKUP

Note: The following codes: , <BAI>, <HAN>, <I>, <O>, <U>, <SB> and <SP> may be regarded as tags which can be used to mark characters, words, phrases, etc. as 'highlighted', that is emphasised in some way. In other instances they may be replaced by a 'pure' SGML tag such as <HPn>, highlighted phrase, where n is the numeric value assigned to a particular form of highlighting which is determined at the time of presentation (bold, italic, etc.). However, for patent documents, for the purposes of readability, it is recommended that the codes below be used instead. (Highlighted phrase identifiers are not contained in the DTD).

12. : Bold

This indicates a text portion to be highlighted as bold. An end tag is required.

Required Attribute(s):

None

Optional Attribute(s):

None

DTD Syntax:

```
<!ELEMENT b      - - (%ptext;)+ -(b)          -- Bold typeface           -->
```

Example:

This text is bold

This text is bold

13. <BAI> : BAikaku

This indicates a Japanese text portion to be highlighted using an expanded font. An end tag is required.

Required Attribute(s):

None

Optional Attribute(s):

None

DTD Syntax:

```
<!ELEMENT bai     - - (%ptext;)+ -(bai|han)       -- Expanded font           -->
```

HANDBOOK ON INDUSTRIAL PROPERTY INFORMATION AND DOCUMENTATION

Ref.: Standards -- ST.32

page: 3.32.24

14. <HAN> : HANkaku

This indicates a Japanese text portion to be highlighted using a compressed font. An end tag is required.

Required Attribute(s):

None

Optional Attribute(s):

None

DTD Syntax:

```
<!ELEMENT han      - - (%ptext;)+ -(han|bai)          -- Compressed font           -->
```

15. <I> : Italic

This indicates a text portion to be highlighted as italic. An end tag is required.

Required Attribute(s):

None

Optional Attribute(s):

None

DTD Syntax:

```
<!ELEMENT i       - - (%ptext;)+ -(i)            -- Italics                -->
```

Example:

This text is italic

<I>This text is italic</I>

16. <o> : 'Over' embellishments

The over-character tag is used to identify parts of text over which special accents or diacritical marks are to be placed. Note: the 'mark' could also be placed mid character. In mathematical formulae use <ov>. An end tag is required.

Required Attribute(s):

None

Optional Attribute(s):

POS= The position attribute defines the position of the mark and takes one of the values: above or mid. The default value is above.

STYLE= The style attribute defines the style of the mark. It takes one of the values: single, double, triple, dash, dots, or bold. The default value is single.

HANDBOOK ON INDUSTRIAL PROPERTY INFORMATION AND DOCUMENTATION

Ref.: Standards -- ST.32

page: 3.32.25

TYPE=

The type attribute defines the type of the mark to be used. It takes one of the values: dot, dotdot, dot3, dot4, tie, tiebrace, hat, hacek, acute, grave, cedil, ring, macron, ogonek, dblac, breve, tilde, vec, rvec, dyad, circle, caret, prime, dprime, plus, none, bar. The default value is bar.

Note: Not all combinations of type and style attribute values would normally be used, eg type=tilde, style=dots.

DTD Syntax:

```
<!ELEMENT o  - - (%ptext;)+ -(o|ov)      -- 'Over' embellishment      -->
<!ATTLIST o  pos   (above|mid) "above"    -- position of 'over' embellishment  --
              type  (%type;)  "bar"       -- types of embellishment(default bar) --
              style (%style;) "single"   -- Line style      (default single)    -->
```

Examples:

This text has a single continuous bar over
the whole sentence.

<o>This text has a single continuous bar
over the whole sentence</o>

The word example is covered by a
dashed bar

The word <o style=DASH>example</o> is
covered by a dashed bar.

17. <u> : Under embellishments

The under-character tag is used to identify parts of text under which special accents or diactical marks may be placed - typically an underscore. In mathematical formulae use <ov pos=BELLOW>. An end tag is required.

Required Attribute(s):

None

Optional Attribute(s):

STYLE=

The style attribute defines the style of the mark. It takes one of the values: single, double, triple, dash, dots, or bold. The default value is single.

TYPE=

The type attribute defines the type of the mark to be used. It takes one of the values: dot, dotdot, dot3, dot4, tie, tiebrace, hat, hacek, acute, grave, cedil, ring, macron, ogonek, dblac, breve, tilde, vec, rvec, dyad, circle, caret, prime, dprime, plus, bar. The default value is bar.

Note: Not all combinations of type and style attribute values would normally be used, eg type=tilde, style=dots.

DTD Syntax:

```
<!ELEMENT u  - - (%ptext;)+ -(u|ov)      -- Underscore embellishment      -->
<!ATTLIST u  type  (%type;)  "bar"       -- types of embellishment(default bar) --
              style(%style;) "single"   -- Line style      (default single)    -->
```

Examples:

HANDBOOK ON INDUSTRIAL PROPERTY INFORMATION AND DOCUMENTATION

Ref.: Standards -- ST.32

page: 3.32.26

This text has a single continuous underscore for the whole sentence.

<U>This text has a single continuous underscore (bar) for the whole sentence.</U>

The word example is underscored with a double bar.

The word <U
STYLE=DOUBLE>example</U> is underscored with a double bar.

18. <SB> : SuBscript

This indicates a text portion to be placed as a subscript (inferior) to the immediately preceding character. An end tag is required. See also the <SUB> tag used in mathematical formulae.

Required Attribute(s):

None

Optional Attribute(s):

POS=

The position attribute takes one of the values: pre, mid or post, post being the default.

DTD Syntax:

```
<!ELEMENT sb      - - ((%hil;)|(#PCDATA))* -(fla) -- Subscript          -->
<!ATTLIST (sp|sb) pos (PRE|MID|POST) "POST"           -- Position (default post) -->
```

Example:

H₂O H<SB>2</SB>O

19. <SP>: SuPerscript

This indicates a text portion to be placed as a superscript (superior) to the immediately preceding character. An end tag is required. See also the <SUP> tag used in mathematical formulae.

Required Attribute(s):

None

Optional Attribute(s):

POS=

The position attribute takes one of the values: pre, mid or post, post being the default.

HANDBOOK ON INDUSTRIAL PROPERTY INFORMATION AND DOCUMENTATION

Ref.: Standards -- ST.32

page: 3.32.27

DTD Syntax:

```
<!ELEMENT sp      - - ((%hil;)|(#PCDATA))* -(fla) -- Superscript          -->
<!ATTLIST (sp|sb) pos (PRE|MID|POST) "POST"           -- Position (default post)    -->
```

Example:

Xⁿ⁻¹ X<SP>n-1</SP>

MISCELLANEOUS

20. <CHF> : CCharacter Fraction constructs

This indicates 'fraction' constructs in general text. The alignment of 'numerator' and 'denominator' is centred by default. It should be used only in general text. An end tag is required.

See also the 'true' fraction tag, <FRAC>, used in mathematical formulae.

Required Attribute(s):

None

Optional Attribute(s):

ALIGN= Indicates the alignment of the numerator and/or denominator, which may be centre, left, right - centre is the default.

Example: (See below)

21. <CHFBR> : CCharacter Fraction BBreak

This identifies the start of a character fraction 'denominator'. No end tag is necessary.

Required Attribute(s):

None

Optional Attribute(s):

STYLE= The style attribute defines the style of the mark preceding the character fraction denominator. It takes one of the values: single, double, triple, dash, dots, or bold. The default value is single.

TYPE= The type attribute defines the type of the mark to be used preceding the character fraction denominator. It takes one of the values: dot, dotdot, dot3, dot4, tie, tiebrace, hat, hacek, acute, grave, cedil, ring, macron, ogonek, dblac, breve, tilde, vec, rvec, dyad, caret, circle, plus, prime, dprime, bar, none. The default value is bar.

Note: Not all combinations of type and style attribute values would normally be used, eg type=tilde, style=dots.

HANDBOOK ON INDUSTRIAL PROPERTY INFORMATION AND DOCUMENTATION

Ref.: Standards -- ST.32

page: 3.32.28

DTD Syntax:

```
<!ELEMENT chf  - - (((#PCDATA)|(%hil;))+, chfbr) -- character fraction      -->
<!ATTLIST chf align (%align;) "centre"           -- alignment          --
<!ELEMENT chfbr - o (((#PCDATA)|(%hil;))+        -- character fraction break   -->
<!ATTLIST chfbr type   (%type;) "bar"            -- types of embellishment(default bar) --
                     style   (%style;) "single"         -- Line style    (default single) -->
```

Examples:

$\frac{2x}{3xy}$

20 <CHF>20<CHFBR TYPE=NONE>D</CHF>
D

22. <FLA> : FLoating Accents

This indicates a character, or characters, enhanced with a particular attributing feature(s). It enables "composite" characters not in a character set to be composed from characters and character entity references. It should be used in combination with the <FLAC> tag. An end tag is required.

Required Attribute(s):

None

Optional Attribute(s):

None

DTD Syntax:

```
<!ELEMENT fla  - - (((#PCDATA)|(%hil;))+, flac)      -- Floating accent construct -->
```

HANDBOOK ON INDUSTRIAL PROPERTY INFORMATION AND DOCUMENTATION

Ref.: Standards -- ST.32

page: 3.32.29

23. <FLAC> : FLoating ACCent

This indicates the start of a floating accent to be placed above, mid, or below a base character, or characters, above is the default. It enables "composite" characters not in a character set to be composed from characters and character entity references. It should be used in combination with the <FLA> tag. No end tag is necessary.

Required Attribute(s):

None

Optional Attribute(s):

POS= The position attribute takes one of the values: above, mid or below, above being the default.

DTD Syntax:

```
<!ELEMENT flac - o ((#PCDATA)|(%hil;))+      -- Floating accent (upper part) -->
<!ATTLIST flac pos (ABOVE|MID|BELOW) "ABOVE" -- Position (default above)      -->
```

Examples:

Å <FLA>A<FLAC>ˆ</FLA>

a <FLA>a<FLAC>•</FLA>

HANDBOOK ON INDUSTRIAL PROPERTY INFORMATION AND DOCUMENTATION

Ref.: Standards -- ST.32

page: 3.32.30

24. <LTL> : LiTeraL text

Indicates the beginning of text in which the space, indents, line endings, etc., should be preserved as keyed in the original layout. An end tag is required.

Required Attribute(s):

None

Optional Attribute(s):

WI=nnn Width: 3-digit expression in millimetres.

DTD Syntax:

```
<!ELEMENT ltl      - - CDATA          -- Literal text      -->
<!ATTLIST ltl    wi    NUMBER    #IMPLIED      -- Width in mm      -->
```

Example:

This text
has a special
layout
which must be
preserved
exactly
as entered.

```
<LTL>
  This text
    has a special
      layout
        which must be
          preserved
            exactly
              as entered.
</LTL>
```

HANDBOOK ON INDUSTRIAL PROPERTY INFORMATION AND DOCUMENTATION

Ref.: Standards -- ST.32

page: 3.32.31

PAGE STRUCTURE TAGS

The following tags are specific to patent document processing and are to be used to indicate page structure in order to allow exact citation of pages, page numbers, columns and lines. For post processing of the data these tags can, of course, be ignored if required.

25. <TXF> : TeXt Frame

This indicates an area of text within a page of a document. An end tag is not allowed - it is an EMPTY element.

Required Attribute(s):

FR=nnnn Consisting of a 4-digit sequence number within a page.

HE=nnn Height: 3-digit expression in millimetres.

WI=nnn Width: 3-digit expression in millimetres.

Optional Attribute(s):

LX=nnnn 4-digit X-coordinate expressed in 1/10 millimetres referencing to the top left corner of the page.

LY=nnnn 4-digit Y-coordinate expressed in 1/10 millimetres referencing to the top left corner of the page.

FONT=name The font used in the text frame, eg Courier, Helvetica, etc.

SIZE=nn A 2 digit number for the point size of the font.

LS=n Where n is the number (may be decimal) of the line spacing within the text frame.

DTD Syntax:

```
<!ELEMENT txf - o EMPTY
<!ATTLIST txf fr NUTOKEN #REQUIRED
      he NUMBER #REQUIRED
      wi NUMBER #REQUIRED
      lx NUMBER #IMPLIED
      ly NUMBER #IMPLIED
      font CDATA #IMPLIED
      size NUMBER #IMPLIED
      ls NUTOKEN #IMPLIED
      -- Text frame
      -- Txf identity
      -- Height in mm
      -- Width in mm
      -- X-coord 1/10 mm
      -- Y-coord 1/10 mm
      -- Font name
      -- Font point size
      -- Line spacing
      -->
      -->
      -->
      -->
      -->
      -->
      -->
```

Example:

```
<PATDOC CY=JP>
<SDOAB>
<TXF FR=0001 HE=080 WI=080 LX=0200 LY=1800>
<P>Japanese Patent Office abstract...
</SDOAB></PATDOC>
```

HANDBOOK ON INDUSTRIAL PROPERTY INFORMATION AND DOCUMENTATION

Ref.: Standards -- ST.32

page: 3.32.32

26. <DP> : Document Page

This indicates the beginning of a page. No end tag is necessary.

Note: The use of this tag is optional since it is a formatting tag. It may be discarded at the time of presentation. However, it may be useful for patent documents where page citation is common and may need to be preserved in electronic document systems.

Required Attribute(s):

N=nnnn 4-digit number being the page number per document.

Optional Attribute(s):

None

DTD Syntax:

```
<!ELEMENT dp      - o EMPTY                      -- Document page break -->
<!ATTLIST dp    n   NMTOKEN #REQUIRED           -- Document page number -->
```

Example:

```
<DP N=6>This is the start of page 6
```

27. <PCL> : Page CoLumn

This indicates the beginning of a column in a page. It should always be preceded by <TXF> tag. No end tag is necessary.

Note: The use of this tag is optional since it is a formatting tag. It may be discarded at the time of presentation. However, it may be useful for patent documents, where column citation is used, and may need to be preserved in electronic document systems.

Required Attribute(s):

N=nnnn 4-digit number being the column number.

Optional Attribute(s):

None

DTD Syntax:

```
<!ELEMENT pcl     - o EMPTY                      -- Page column        -->
<!ATTLIST pcl   n   NMTOKEN #REQUIRED           -- Page column number -->
```

HANDBOOK ON INDUSTRIAL PROPERTY INFORMATION AND DOCUMENTATION

Ref.: Standards -- ST.32

page: 3.32.33

Example:

<PCL N=2>This is the start of column 2

28. <PLN> : Page LiNe

This indicates the beginning of a line within a page. It should always be preceded by a <TXF> tag. No end tag is necessary.

Note: The use of this tag is optional since it is a formatting tag. It may be discarded at the time of presentation. However, it may be useful for patent documents, where line number citation is common, and may need to be preserved in electronic document systems.

Required Attribute(s):

N=nnnn 4-digit number being the line number.

Optional Attribute(s):

None

DTD Syntax:

```
<!ELEMENT pln      - o EMPTY           -- page line      -->
<!ATTLIST pln      n   NMTOKEN #REQUIRED    -- page line number -->
```

Example:

<PLN N=15>This is the start of line 15

LISTS

TABLE OF SGML TAGS AND ATTRIBUTES		
TAG	NAME	DESCRIPTION
<DD>	Definition Description	Indicates a text portion which is the description of a tagged item in a definition list. No end tag is necessary.
<DL>	Definition List	Indicates a text portion to be displayed as a list, each item comprising a term followed by a description. An end tag is required.
<DT>	Definition Term	Indicates a text portion which is the term in a definition list. No end tag is necessary.
	List Item	Indicates the beginning of an item which forms part of a simple, ordered or unordered list. No end tag is necessary.
	Ordered List	Indicates a text portion to be displayed as a list, each item being identified by a sequential number or letter. An end tag is required.
<SL>	Simple List	Indicates a text portion to be displayed as a simple list. An end tag is required.
	Unordered List	Indicates a text portion to be displayed as a list, each item identified by a symbol which is defined in a required attribute (ST). An end tag is required.
ATTRIBUTE	NAME	DESCRIPTION
COMPACT	COMPACT	Indicates if lists should be processed as compact
LEVEL	LEVEL	Nesting level of a list
NUMSTYLE	NUMSTYLE	Numeric style of a list
PREFIX	PREFIX	Prefix for each list item
ST	STyle	Style (character or graphic) of an unordered list item
TSIZE	Term SIZE	Indicates the horizontal space allowed for definition terms plus gutter space

HANDBOOK ON INDUSTRIAL PROPERTY INFORMATION AND DOCUMENTATION

Ref.: Standards -- ST.32

page: 3.32.36

SGML TAGS: DESCRIPTION AND USAGE

29. <DL> : Definition List

This indicates a text portion known as a definition or glossary list. A definition list contains one or more items, each followed by its description. The items are identified by the <DT> identifier and the description by the <DD> identifier. An end tag is required.

Required Attribute(s):

None

Optional Attribute(s):

TSIZE= This attribute is used to specify the indent to be used for the definition description. It is normally larger than the maximum width of the terms.

COMPACT= Used to indicate when no blank lines are to be left between definition items at the time of presentation.

DTD Syntax:

```
<!ELEMENT dl  - - (dt,dd)+          -- Definition list      -->
<!ATTLIST dl  tsize    NUMBER #IMPLIED   -- Term size attribute  --
                           compact (compact) #IMPLIED   -- Spacing between items  -->
```

Example: (see below)

30. <DT> : Definition Term

This indicates a term in a definition list. No end tag is necessary.

Required Attribute(s):

None

Optional Attribute(s):

None

DTD Syntax:

```
<!ELEMENT dt  - o (%ptext;)           -- Definition term      -->
```

Example: (see below)

31. <DD> : Definition Description

This indicates the description of an item (term) marked <DT> in a definition list. No end tag is necessary.

Required Attribute(s):

None

Optional Attribute(s):

None

HANDBOOK ON INDUSTRIAL PROPERTY INFORMATION AND DOCUMENTATION

Ref.: Standards -- ST.32

page: 3.32.37

DTD Syntax:

```
<!ELEMENT dd      - o ((%ptext;)|p)+           -- Definition description      -->
```

Example: In this example it is assumed that none of the terms exceed the length that may have been specified as default for such lists.

EPO	European Patent Office	<DL>
JPO	Japanese Patent Office	<DT>EPO
USPTO	United States Patent and Trademark Office	<DD>European Patent Office
		<DT>JPO
		<DD>Japanese Patent Office
		<DT>USPTO
		<DD>United States Patent and
		Trademark Office
		</DL>

32. : Ordered List

This indicates a portion of structured text known as a list. An ordered list will have a sequence of numbers or letters generated at the time the document is created, not at the time of presentation, to indicate the relative position in the list of each item. Lists may be nested. An end tag is required.

Required Attribute(s):

None

Optional Attribute(s):

COMPACT=	Used to indicate when no blank lines are to be left between items at the time of presentation.
LEVEL=	Used to indicate the nesting level of a list.
NUMSTYLE=	Used to indicate the numeric style of a list.
PREFIX=	Used to indicate prefix for each list item.

DTD Syntax:

```
<!ELEMENT ol      - - (li)+           -- Ordered list      -->
<!ATTLIST ol    compact  (compact) #IMPLIED
                level     NUMBER    #IMPLIED
                numstyle CDATA     #IMPLIED
                prefix   CDATA     #IMPLIED           -- Spacing between items      --
                                                -- Nesting level of list      --
                                                -- Numbering style      --
                                                -- Prefix for each list item      -->
```

Example: (see below)

HANDBOOK ON INDUSTRIAL PROPERTY INFORMATION AND DOCUMENTATION

Ref.: Standards -- ST.32

page: 3.32.38

33. <SL> : Simple List

This indicates a portion of structured text known as a list. A simple list will not have anything preceding the list items to indicate them as such. Lists may be nested. An end tag is required.

Required Attribute(s):

None

Optional Attribute(s):

COMPACT= Used to indicate when no blank lines are to be left between items at the time of presentation.

LEVEL= Used to indicate the nesting level of a list.

DTD Syntax:

```
<!ELEMENT sl  - - (li)+                                           -- Simple list  
<!ATTLIST sl compact (compact) #IMPLIED                   -- Spacing between items  
              level     NUMBER    #IMPLIED                   -- Nesting level of list                                   -->
```

Example: (see below)

34. : Unordered List

This indicates a portion of structured text known as a list. An unordered list will have symbols generated at the time of presentation to indicate each item. Lists may be nested. An end tag is required.

Required Attribute(s):

ST= This attribute is followed by an identifier for the character or the graphic symbol required to indicate each separate item in the list.

Optional Attribute(s):

COMPACT= Used to indicate when no blank lines are to be left between items at the time of presentation.

LEVEL= Used to indicate the nesting level of a list.

DTD Syntax:

```
<!ELEMENT ul  - - (li)+                                   -- Unordered list  
<!ATTLIST ul st        NMTOKEN    #REQUIRED           -- Ulist symbol  
              level     NUMBER    #IMPLIED               -- Nesting level of list  
              compact (compact) #IMPLIED                   -- Spacing between items                                   -->
```

Example: (see below)

HANDBOOK ON INDUSTRIAL PROPERTY INFORMATION AND DOCUMENTATION

Ref.: Standards -- ST.32

page: 3.32.39

35. : List Item

This indicates an item of a list, , <SL> and . No end tag is necessary.

Required Attribute(s):

None

Optional Attribute(s):

None

DTD Syntax:

```
<!ELEMENT li      - o ((%ptext;)|p)+          -- List item           -->
```

Examples:

Text

First item in a simple list.

Second item.

more text.

Text

1. First item in a compact ordered list.
 2. Second item.
- more text.

Text<SL>First item in a simple list.
Second item.</SL>more text.

Text<OL COMPACT=COMPACT>First item in a compact ordered list.Second item.
more text.

Text

- First item in an unordered list with 'bullets'.
- Second item.

more text.

Text

```
<UL ST="&bull;">  
<LI>First item in an unordered list with  
'bullets'.  
<LI>Second item.  
</UL>  
more text
```

Note: here we have a character entity reference "•" since a 'bullet' is not a character in the base code page ISO 646. It is contained in the public entity references cited in the DTD at Annex B.

HANDBOOK ON INDUSTRIAL PROPERTY INFORMATION AND DOCUMENTATION

IMAGES

TABLE OF SGML TAGS AND ATTRIBUTES		
TAG	NAME	DESCRIPTION
<ELE>	Embedded image LLegend	Indicates a portion of text directly related to an embedded image. Attributes required. An end tag is required.
<EMI>	EMbedded Image	Indicates non character-coded data. Attributes required. No end tag is required since this is a reference to an external image file and the tag is empty.
<EMR>	EMbedded image Reference	Indicates a reference to a previous EMI. Attributes required. No end tag is necessary since it is self-contained and the tag is empty.
<RTI>	Replacement of Text by Image	Indicates text that is also captured as an image. The image data may be used in place of the text in order to guarantee that presentation is identical to the original document. Attributes required. An end tag is necessary.
<GAI>	GAIji	Indicates a reference to a Gaiji (Japanese) dot font file which is composed of five dot font files. Attributes required. An end tag is required.
ATTRIBUTE	NAME	DESCRIPTION
FILE	FILE	External file name of the image
HE	HEight	Height of images in mm
ID	InDentifier	Has various parameters depending on tag
IMF	IMage Format	Indicates the image format of a stored image.
LX	X coordinate	X coordinate of image in 1/10mm
LY	Y coordinate	Y coordinate of image in 1/10mm
TI	Type of Image	Type of image stored
WI	WIdth	Width of images in mm

HANDBOOK ON INDUSTRIAL PROPERTY INFORMATION AND DOCUMENTATION

Ref.: Standards -- ST.32

page: 3.32.42

SGML TAGS: DESCRIPTION AND USAGE

36. <EMI> : EMbedded Image

This indicates any information which is not character coded, for example, drawings, chemical structures, graphs, etc. It is non-SGML data. No end tag is necessary since no text is allowed, it is empty. The information will normally be stored in a standard graphics file format. WIPO Standard ST.33 (compression according to CCITT Group 4) is the recommended default.

For external references, that is, to the image itself, we have a unique identifier to the external name of the image via the use of a file name which, for patent documents, is usually the publication number, or application number, of the patent document (acting as the unique filename) in combination with the internal identification specified below.

Required Attribute(s):

ID=nnnn.nnnn Internal identifier consisting of a 4-digit sequence number indicating the original page number on which the image occurred and a 4-digit sequence number indicating the sequence of images on that particular page. (This follows the frame and sequence number indexing methodology used in WIPO Standard ST.33). Optionally, it may be replaced by a sequential numbering of images within a document, in which case use ID=nnnnnnnn. Either form is valid.

HE=nnn Height: 3-digit expression in millimetres.

WI=nnn Width: 3-digit expression in millimetres.

Optional Attribute(s):

FILE=name Where 'name' is the name (with pointer if required) of the image file, which contains the embedded image.

LX=nnnn 4-digit X-coordinate expressed in 1/10 millimetres of embedded image location referencing to the top left corner of the page.

LY=nnnn 4-digit Y-coordinate expressed in 1/10 millimetres of embedded image location referencing to the top left corner of the page.

Note : The above two attributes should be used only when physical pages are represented. In all cases leading zeros may be dropped.

IMF= Indicates, generally, the type of IMage Format, or File, of the stored image. Possible formats and files include:

ST33	WIPO ST.33 (default)
CGM	Computer Graphics Metafile
EPS	Encapsulated Postscript
G3	CCITT Group 3 compression
G4	CCITT Group 4 compression
TIFF	Tag Image File Format
IGES	Initial Graphics Exchange Format
JPEG	Joint Photographic Experts Group Format
MPEG	Motion Picture Experts Group Format
GEM	Digital Research GEM
AI	Adobe Illustrator

HANDBOOK ON INDUSTRIAL PROPERTY INFORMATION AND DOCUMENTATION

Ref.: Standards -- ST.32

page: 3.32.43

GIF	Compuserve Graphics Image Format
PCT	Apple Picture File Format
BMP	Microsoft Bitmap File Format
PCX	Paintbrush File Format
WMF	Windows Metafile Format
PGL	Hewlett-Packard Graphics Language
WPG	WordPerfect Graphics File format
etc.	

The default format used is office-dependent and must be stated in the DTD. Also note that they are not mutually exclusive, for example, ST.33 and TIFF files may comprise CCITT Group 4 compression.

TI= Type of embedded Image. Possible type names include:

AD	Abstract Drawing
CF	Chemical Formulae
CI	Clipped Image
CP	Computer Programs
DN	DNA sequences
DR	Drawings
FF	undefined characters
FG	Figures
GR	GRaphs
MF	Mathematical Formulae
PA	Full Page facsimile image
PH	Photographs
SR	Search Report forms
TB	Tabular data
TX	Text character(s)
UI	Undefined Images

DTD Syntax:

```
<!ELEMENT emi - o EMPTY>                                -->
<!ATTLIST emi id NUTOKEN #REQUIRED                      -- Embedded image      -->
          he NUMBER #REQUIRED                         -- Image identity     --
          wi NUMBER #REQUIRED                         -- Height in mm       --
          file CDATA #IMPLIED                        -- Width in mm        --
          lx NUMBER #IMPLIED                         -- image file name    --
          ly NUMBER #IMPLIED                         -- X-coord 1/10 mm     --
          imf (%imgfmt; ) #IMPLIED                   -- Y-coord 1/10 mm     --
          ti (AD|CF|CI|CP|DN|DR|FF|FG|GR|MF|PA|PH|SR|TB|TX|UI) #IMPLIED   -- Format stored emi --
                                                               -- Image type          -->
```

Examples:

```
<EMI ID='2.1' HE=10 WI=20 TI=CF>
```

Identifies the first embedded image on page 2 of the current document which is a chemical representation with actual sizes of 10mm vertical and 20mm horizontal.

```
<EMI FILE="d:\image\fig22.wpg" ID="12.6" HE=30 WI=100 IMF=WPG TI=MF>
```

Note: The identity attribute has been standardised for embedded images, footnotes and their associated references. The use of page and frame number generates a unique code within a document that will:

- identify the related entities;

HANDBOOK ON INDUSTRIAL PROPERTY INFORMATION AND DOCUMENTATION

Ref.: Standards -- ST.32

page: 3.32.44

- form a means of reference to the original document when inspecting the digitised data; and
- bind the entities together at the time of presentation, without regard to the fact that the final page location may differ from that of the original document.

37. <ELE> : Embedded image LLegend

This indicates a portion of text directly related to an embedded image. An end tag is required.

Required Attribute(s):

ID=nnnn.nnnn

Consisting of a 4-digit sequence number indicating the page number on which the image occurred and a 4-digit sequence number indicating the sequence of images on that particular page. This attribute contains exactly the same values as the congruent attribute of the related embedded image. Optionally, it may be replaced by a sequential numbering of images within a document, in which case use ID=nnnnnnnn. Either form is valid. Leading zeros may be dropped.

Optional Attribute(s):

None

DTD Syntax:

```
<!ELEMENT ele - - (%ptext;)+ -- Figure caption -->
<!ATTLIST ele id NUTOKEN #REQUIRED
>
```

Examples:

...<ELE ID="2.1">This is the legend of the first embedded image on page 2</ELE>...

38. <EMR> : EMbedded image Reference

This indicates a reference to an embedded image. The tag is self-contained. This tag should be used for referring to images which occur more than once in a document, since the full <EMI> tag need not be repeated and the image need not be scanned more than once.

Required Attribute(s):

ID=nnnn.nnnn

Consisting of a 4-digit sequence number indicating the original page number on which the image occurred and a 4-digit sequence number indicating the sequence of images on that particular page. This attribute contains exactly the same values as the congruent attribute of the referenced embedded image. Optionally, it may be replaced by a sequential numbering of images within a document, in which case use ID=nnnnnnnn. Either form is valid. Leading zeros may be dropped.

Optional Attribute(s):

None

HANDBOOK ON INDUSTRIAL PROPERTY INFORMATION AND DOCUMENTATION

Ref.: Standards -- ST.32

page: 3.32.45

DTD Syntax:

```
<!ELEMENT emr      - o EMPTY                                -- Reference to emi      -->
<!ATTLIST emr    id   NUTOKEN   #REQUIRED
>
```

Examples:

...<EMR ID="2.1">This is a reference to the first embedded image on page 2...

Note: For further explanation see <EMI> above.

39. <RTI> : Replacement of Text by Image

Indicates text that is also captured as an image. The image data may be used in place of the text in order to guarantee that presentation is identical to the original document. An end tag is required. The image should be stored in a standard format, for example WIPO Standard ST.33.

Required Attribute(s):

ID=nnnn.nnnn	Consisting of a 4-digit sequence number indicating the page number on which the image occurred and a 4-digit sequence number indicating the sequence of images on that particular page. Optionally, it may be replaced by a sequential numbering of images within a document, in which case use ID=nnnnnnnn. Either form is valid. In both cases leading zeros may be deleted.
HE=nnn	Height: 3-digit expression in millimetres.
WI=nnn	Width: 3-digit expression in millimetres.

HANDBOOK ON INDUSTRIAL PROPERTY INFORMATION AND DOCUMENTATION

Ref.: Standards -- ST.32

page: 3.32.46

Optional Attribute(s):

FILE=name	Where 'name' is the name (with pointer if required) of the image file, which contains the RTI image.
IMF=	Indicates, generally, the type of IMage Format, or File, of the stored image. See <EMI> for full list. ST33 WIPO ST.33 (default)
	The default format used is office-dependent and must be stated in the DTD. Also note that they are not mutually exclusive, for example, a TIFF file may comprise CCITT Group 4 compression.
LX=nnnn	4-digit X-coordinate expressed in 1/10 millimetres of embedded image location referencing to the top left corner of the page.

LY=nnnn 4-digit Y-coordinate expressed in 1/10 millimetres of embedded image location referencing to the top left corner of the page.

Note: The above two attributes are used only when physical pages are represented.

DTD Syntax:

```
<!ELEMENT rti -- CDATA -->
<!ATTLIST rti id NUTOKEN #REQUIRED      -- Replace text with image --
          he NUMBER    #REQUIRED      -- rti identity --
          wi NUMBER    #REQUIRED      -- Height in mm --
          file CDATA   #IMPLIED       -- Width in mm --
          lx NUMBER    #IMPLIED       -- image file name --
          ly NUMBER    #IMPLIED       -- X-coord 1/10 mm --
          imf (%imgfmt; )#IMPLIED     -- Y-coord 1/10 mm --
                                         -- image format -->
```

Example:

```
<SDOBI><B100>Minimum B100 tags required here<B100>
<RTI ID=00000001 HE=150 WI=170 LX=0200 LY=0300>
Japanese Patent Office title page (bibliographic information)...
</RTI>
</SDOBI>
```

40. <GAI> : GAIji

This indicates a reference to a Gaiji dot font file which is composed of five dot font files each of different sizes. It may be of particular use within the Japanese Patent Office. An end tag is required.

Required Attribute(s):

ID=nnnn Consisting of a 4-digit number indicating the sequence number of the dot font character in the Gaiji file.

Optional Attribute(s):

None.

HANDBOOK ON INDUSTRIAL PROPERTY INFORMATION AND DOCUMENTATION

Ref.: Standards -- ST.32

page: 3.32.47

DTD Syntax:

```
<!ELEMENT gai      - -  CDATA          -- Gaiji character      -->
<!ATTLIST gai    id    NUTOKEN   #REQUIRED
>
```

Example:

お

```
<GAI ID=0001> Japanese Gaiji dot font character </GAI>
```

HANDBOOK ON INDUSTRIAL PROPERTY INFORMATION AND DOCUMENTATION

Ref.: Standards -- ST.32

page: 3.32.48

TABLES

TABLE OF SGML TAGS AND ATTRIBUTES		
TAG	NAME	DESCRIPTION
<CEL>	table CELI	Indicates start of a new cell. No end tag is necessary.
<ROW>	table ROW	Indicates start of a new row. No end tag is necessary.
<TAB>	TABLE	Indicates the beginning of the tabular data. Attribute required. An end tag is required.
<TCH>	Table Column Header	For one particular column or multiple columns. No end tag is necessary.
<TSB>	Table Stub lines	For single or multiple rows. No end tag is necessary.
<TSH>	Table SubHeading	For one or more columns, same as for header. No end tag is necessary.
<TTI>	Table Title	May appear above or below the actual table. No end tag is necessary.
ATTRIBUTE	NAME	DESCRIPTION
AL	ALign	Used to justify the tabular data
CB	Column Begin	Indicates start and end columns
CE	Column End	For straddle headers or cells
CO	COlumn	Number of columns in the table
CS	Column Separator	Column separation attributes
ID	IDentifier	Any identifier applied to the original table
OR	ORientation	Used to signal table orientation
RB	Row Begin	Indicates start and end rows
RE	Row End	For straddle stub lines or cells
ROTATION	ROTATION	Rotation of data within a cell
RS	Row Separator	Row separation attributes

HANDBOOK ON INDUSTRIAL PROPERTY INFORMATION AND DOCUMENTATION

Ref.: Standards -- ST.32

page: 3.32.49

SGML TAGS: DESCRIPTION AND USAGE

41. <TAB> : TABular material

This indicates the beginning of tabular data. An end tag is required.

Required Attribute(s):

CO=nn 2-digit number giving the total number of columns in a table.

Optional Attribute(s):

ID= Any identifier applied to the original table, for example, 'TABLE 1.'

OR= Orientation.

L Landscape

P Portrait (default)

RS= Row Separator(s)

CS= Column Separator(s)

RS and CS consist of a row or column identifier and separator style.

Row and Column identifiers are:

P Preceding first column or row

F Following last column or row

A All columns or rows not explicitly identified

n Explicit number of row or column to follow

Separator style.

Possible styles are:

BL blank space between (default)

S single

D double

T triple

B bold

DA dashed

DT dotted

DTD Syntax:

```
<!ELEMENT tab  -- (row, (%rowcnt; ))p)+>
<!ATTLIST tab  co NUMBER #REQUIRED
               or (L|P) "P"
               id CDATA  #IMPLIED
               cs CDATA  #IMPLIED
               rs CDATA  #IMPLIED
               -- Main structure      -->
               -- Number of columns  --
               -- Orientation        --
               -- Identifier         --
               -- Col separators     --
               -- Row separators     --
```

Examples:

```
<TAB CO=5 ID='Table 1'>
<ROW><CEL>DATA 1<CEL>DATA 2<CEL>DATA 3<CEL>DATA 4<CEL>DATA 5
</TAB>
```

HANDBOOK ON INDUSTRIAL PROPERTY INFORMATION AND DOCUMENTATION

Ref.: Standards -- ST.32

page: 3.32.50

tabular material consisting of five columns of information identified as Table 1:

Table 1

DATA 1	DATA 2	DATA 3	DATA 4	DATA 5
--------	--------	--------	--------	--------

```
<TAB CO=6 RS='P B F B A S' CS='P B F B A S'>
<ROW><CEL>DATA 1<CEL>DATA 2<CEL>DATA 3<CEL>DATA 4<CEL>DATA 5<CEL>DATA 6
</TAB>
```

Tabular material consisting of six columns of information surrounded by a bold box and the rows and columns separated by single lines:

DATA 1	DATA 2	DATA 3	DATA 4	DATA 5	DATA 6
--------	--------	--------	--------	--------	--------

See also below.

42. <TTI> : Table Title

This indicates the title of the tabular data. A title would usually appear above the table but it may also appear below where it would be termed a caption, but the same tag will suffice. No end tag is necessary.

Required Attribute(s):

None

Optional Attribute(s):

AL=	L	Left
	R	Right
	C	Centered (default)

DTD Syntax:

```
<!ELEMENT tti - o (%ptext;)* -- Table title -->
<!ATTLIST tti al (L|R|C) "C" -- Text alignment -->
```

Example:

```
<TTI>Title of the Table.
```

43. <TCH> : Table Column Header

This indicates the header of one column or multiple columns in the table. No end tag is necessary.

Required Attribute(s):

None.

HANDBOOK ON INDUSTRIAL PROPERTY INFORMATION AND DOCUMENTATION

Ref.: Standards -- ST.32

page: 3.32.51

Optional Attribute(s):

AL=	L Left
	R Right
	C Centered (default)
CB=nn	2-digit number giving start column in the case of a straddled header.
CE=nn	2-digit number giving end column in the case of a straddled header.

DTD Syntax:

```
<!ELEMENT tch - o (%ptext;)* -- Column header -->
<!ATTLIST tch cb NUMBER #IMPLIED -- Start column --
              ce NUMBER #IMPLIED -- End column --
              al (L | R | C) "C" -- Text alignment -->
```

Examples:

<TCH>Header for single column

<TCH CB=1 CE=2>Header which straddles both columns one and two.

44. <TSH> : Table Sub-Header

This indicates the subheader of one column or multiple columns in the table. No end tag is necessary.

Required Attribute(s):

None.

Optional Attribute(s):

AL=	L Left
	R Right
	C Centered (default)
CB=nn	2-digit number giving start column in the case of a straddled header.
CE=nn	2-digit number giving end column in the case of a straddled header.

DTD Syntax:

```
<!ELEMENT tsh - o (%ptext;)* -- Column subhead -->
<!ATTLIST tsh cb NUMBER #IMPLIED -- Start column --
              ce NUMBER #IMPLIED -- End column --
              al (L | R | C) "C" -- Text alignment -->
```

HANDBOOK ON INDUSTRIAL PROPERTY INFORMATION AND DOCUMENTATION

Ref.: Standards -- ST.32

page: 3.32.52

Examples:

<TSH>Subheader for single column

<TSH CB=1 CE=2>Subheader which straddles both columns one and two.

45. <TSB> : Table Stub line

This indicates the stub line (text descriptor) for one or more rows in the table. No end tag is necessary.

Required Attribute(s):

None.

Optional Attribute(s):

AL=	L Left (default)
	R Right
	C Centered
	D Decimal
	E Exponent

RB=nn 2-digit number giving start row in the case of a straddled stub line.

RE=nn 2-digit number giving end row in the case of a straddled stub line.

Note: Stub lines may straddle rows. If the leftmost column contains row-straddling stub lines, then all stub lines must specify the RB= (row begin) attribute. Straddling stub lines must also specify the RE= (row end) attribute.

DTD Syntax:

```
<!ELEMENT tsb - o (%ptext;)* -- Stub field -->
<!ATTLIST tsb rb NUMBER #IMPLIED -- Start row --
            re NUMBER #IMPLIED -- End row --
            al (L | R | C | D | E) "L" -- Text alignment -->
```

Examples:

<TSB RB=1>Stub line for a single row where a subsequent stub line straddles more than one row.

<TSB RB=7 RE=8>Stub line which straddles rows seven and eight.

HANDBOOK ON INDUSTRIAL PROPERTY INFORMATION AND DOCUMENTATION

Ref.: Standards -- ST.32

page: 3.32.53

46. <ROW> : ROW

This indicates the start of a new row in the table. No end tag is necessary.

Required Attribute(s):

None

Optional Attribute(s):

None

Note: Simple rows contain only cells. Each cell may contain more than one line of type. Other rows may contain stub lines as the left-most cell. Stub lines may straddle more than one row.

DTD Syntax:

```
<!ELEMENT row      - o EMPTY                                -- Table row           -->
```

Examples:

```
<ROW>row five of table  
<ROW>row six of table.
```

47. <CEL> : CELI

This indicates the start of a new data cell in the table. No end tag is necessary.

Required Attribute(s):

None.

Optional Attribute(s):

AL=	R Right (default)
	L Left
	C Centered
	D Decimal
	E Exponent

RB=nn 2-digit number giving start row in the case of straddled cells.

RE=nn 2-digit number giving end row in the case of straddled cells.

CB=nn 2-digit number giving start column in the case of straddled cells.

CE=nn 2-digit number giving end column in the case of straddled cells.

ROTATION= Specifies the rotation of the contents of a cell.

Note: Cells may straddle columns and/or rows. If a row contains column straddling cells, then all cells must specify the column begin attribute. Likewise, if a row contains row straddling cells, all cells must specify the row begin attribute. Straddling cells must also specify the row end and/or column end attributes. Some rows may contain stub lines as the leftmost cell. Stub lines may also straddle rows but never columns.

HANDBOOK ON INDUSTRIAL PROPERTY INFORMATION AND DOCUMENTATION

Ref.: Standards -- ST.32

page: 3.32.54

DTD Syntax:

```
<!ELEMENT cel - o ((%ptext;)*)                                -- Table cell -->
<!ATTLIST cel rb NUMBER #IMPLIED                                -- Start row --
          re NUMBER #IMPLIED                                -- End row --
          cb NUMBER #IMPLIED                                -- Start column --
          ce NUMBER #IMPLIED                                -- End column --
          al (L | R | C | D | E) "R"                      -- Text alignment --
          rotation NUMBER #IMPLIED                            -- Rotation of cell contents -->
```

Examples:

Simple Table Rows

```
<ROW><CEL>Data<CEL>Data<CEL>Data
```

Complex Table Rows

```
<ROW><CEL CB=1>Data<CEL CB=2 CE=3>Data<CEL CB=4>Data
```

CHEMICAL FORMULAE

TABLE OF TAGS AND ATTRIBUTES		
TAG	NAME	DESCRIPTION
<CHE>	CHEmical formula	Indicates the beginning of a quasilinear formula. An end tag is required.
<CHR>	CHemical Reaction	Indicates the beginning of a chemical reaction formula. An end tag is required.
<CRF>	Chemical ReFerence	Indicates the beginning of a reference to a chemical formula. Attribute required. No end tag is necessary, it is self-contained.
ATTRIBUTE	NAME	DESCRIPTION
ID	IDentifier attribute	A unique name.
NUM	NUMber	Used to specify an explicit formula number.
REFID	REFerence number IDentification	An id reference value giving a unique name.

SGML TAGS: DESCRIPTION AND USAGE

Note: Tagging is confined to relatively simple formulae. No attempt has been made to develop coding for so-called "ring-structures" or Markush structures.

48. <CHE> : CHEmical formula

This indicates the beginning of a quasi-linear chemical formula. An end tag is required.

Required Attribute(s):

None

Optional Attribute(s):

ID= A unique name, which must start with a letter, eg. id=xyz

NUM= Used to specify an explicit formula number.

DTD Syntax:

```
<!ELEMENT che - - (%ptext;)*                                -- Chemical formula      -->
<!ATTLIST che id ID #IMPLIED                                -- chem reaction id     --
          num CDATA #IMPLIED                                -- specific number      -->
```

Example:

2FeCl₂.FeCl₃.xH₂O <CHE>2FeCl<SB>2</SB>.FeCl<SB>3</SB>.xH<SB>2</SB>O</CHE>

HANDBOOK ON INDUSTRIAL PROPERTY INFORMATION AND DOCUMENTATION

Ref.: Standards -- ST.32

page: 3.32.61

49. <CHR> : CChemical Reaction

This indicates the beginning of a chemical reaction formula. An end tag is required. When descriptive text must appear above and/or below an arrow the <CHF> construct is used.

Required Attribute(s):

None

Optional Attribute(s):

ID= A unique name, which must start with a letter, eg. id=xyz

NUM= Used to specify an explicit formula number.

DTD Syntax:

```
<!ELEMENT chr - - (%ptext;)*                                -- Chemical reaction    -->
<!ATTLIST  chr id ID          #IMPLIED                      -- chem reaction id     --
           num CDATA #IMPLIED                      -- specific number      -->
```

Examples:

$\text{BrCH} = \text{CH}_2 + \text{NO}_2\text{Cl} \rightarrow \text{CHBrClCH}_2\text{NO}_2$

```
<CHR>BrCH=CH<SB>2</SB>+NO<SB>2</SB>
Cl&rarr;CHBrClCH<SB>2</SB>NO<SB>2</SB>
</CHR>
```

$\text{ClCH} = \text{CH}_2 + \text{NOCl} \xrightarrow{\text{oxid.}} \text{CHCl}_2\text{CH}_2\text{NO}_2$

```
<CHR>CICH=CH<SB>2</SB>+NOCl<CHF>NOCl
<CHFBR TYPE=VEC>
oxid.</CHF>CHCl<SB>2</SB>CH<SB>2</SB>NO
<SB>2</SB></CHR>
```

50. <CRF> : Chemical ReFerence

This indicates from which point(s) a chemical representation is referenced. The tag is self-contained and therefore there is no end tag. Although a reference might be a text string requiring no markup, markup is recommended for purposes of searching.

Required Attribute(s):

REFID= A unique name, which must start with a letter, eg. refid=xyz

Optional Attribute(s):

None

DTD Syntax:

```
<!ELEMENT crf - o   EMPTY                                -- Reference to che. formula    -->
<!ATTLIST crf refid IDREF #REQUIRED                      -- Unique reference      -->
```

HANDBOOK ON INDUSTRIAL PROPERTY INFORMATION AND DOCUMENTATION

page: 3.32.62

MATHEMATICAL FORMULAE

TABLE OF SGML TAGS AND ATTRIBUTES

TAG	NAME	DESCRIPTION
<ABOVE>	ABOVE	Indicates a formula value to be displayed above another formula value. No end tag is necessary.
<BOX>	BOXes	Indicates parts of a formula to be placed in a box. An end tag is required.
<BREAK>	BREAK	This indicates a line break in the formula. The tag is self contained, ie. it has no content.
<COL>	COLumn(s)	This indicates a column in a matrix. An end tag is required.
<DF>	Display Formula	This indicates the beginning of displayed mathematical formula(e). An end tag is required.
<DFG>	Display Formula Group	This indicates a group of display mathematical formula(e) that are to be processed together. An end tag is required.
<DFREF>	Display Formula REFerence	Indicates a reference to a formula. Attribute required. No end tag is necessary.
<F>	inline Formula	Indicates an inline formula. An end tag is required.
<FENCE>	FENCEs	Indicates a fence or bracket. An end tag is required.
<FRAC>	FRACTIONS	This indicates fractions. An end tag is required.
<FROM>	FROM	Identifies the lower limit for the <INTEGRAL>, <PLEX>, <PRODUCT> and <SUM> tags. No end tag is required.
<INTEGRAL>	INTEGRAL	This indicates information to be displayed as an integral, using the general limits form of presentation. An end tag is required.
<ITALIC>	ITALIC	This indicates parts of a formula to be set in italic. An end tag is required.
<MARK>	MARK	This indicates a mark for vertical alignment within a formula. Attribute required. It is self-contained and therefore no end tag is necessary.
<MARKREF>	MARK REference	This indicates a reference to a defined mark and causing the system to vertically align the formula on that mark. Attribute required. No end tag is necessary.
<MATRIX>	MATRIX	This indicates a matrix formula. An end tag is required.
<MIDDLE>	MIDDLE (post)	This indicates a single separator mark called a post in a formula. An end tag is necessary.
<OF>	OF	Identifies the operand for the <INTEGRAL>, <PLEX>,

HANDBOOK ON INDUSTRIAL PROPERTY INFORMATION AND DOCUMENTATION

Ref.: Standards -- ST.32

page: 3.32.63

TABLE OF SGML TAGS AND ATTRIBUTES		
		<PRODUCT> and <SUM> tags. No end tag is required.
<OPERATOR>	OPERATOR	Identifies an operator in a <PLEX> construction. Its use is optional.
<OV>	OVer	This indicates parts of a formula over which special characters or diacriticals are to be placed. An end tag is required.
<OVER>	OVER	This indicates a fraction denominator. No end tag is necessary.
<PILE>	PILE	This indicates segments of a formula that are to be placed one above the other. An end tag is required.
<PLEX>	PLEX	Identifies a general limits operator. Must be followed immediately by the operator. An end tag is required.
<POWER>	POWER	This indicates an exponential formula. An end tag is required.
<PRODUCT>	PRODUCT	This indicates a formula that presents the product of formula values using the general limits form of presentation. An end tag is required.
<ROMAN>	ROMAN	This indicates parts of a formula to be set in roman. An end tag is required.
<ROOT>	ROOT	This indicates data to be displayed as a root. An end tag is required.
<SQRT>	SQuare Root	This indicates a square root. An end tag is required.
<SQUARE>	SQUARE	This indicates data to be displayed as a square. An end tag is required.
<SUB>	SUBscript	This indicates a mathematical inferior placed as a subscript. An end tag is required.
<SUM>	SUMmation	This indicates a formula to be displayed as a summation, using the general limits form of presentation. An end tag is required.
<SUP>	SUPerscript	This indicates a mathematical superior placed as a superscript. An end tag is required.
<TENSOR>	TENSORS	This indicates a tensor. Attribute required. An end tag is required.

HANDBOOK ON INDUSTRIAL PROPERTY INFORMATION AND DOCUMENTATION

Ref.: Standards -- ST.32

page: 3.32.64

TABLE OF SGML TAGS AND ATTRIBUTES		
ATTRIBUTE	NAME	DESCRIPTION
<TO>	TO	Identifies the upper limit for the <INTEGRAL>, <PLEX>, <PRODUCT> and <SUM> tags. No end tag is required.
<VEC>	VECtor	This indicates a vector. An end tag is required.
ALIGN	ALIGNment	Used to specify alignment of data.
CLOSE	CLOSE	Use to specify a character in fence constructs.
ID	IDentifier attribute.	Used to specify various formula identity attributes.
NUM	NUMber	Used to specify an explicit formula number.
OPEN	OPEN	Used to specify a character in fence constructs.
PAGE	PAGE	Used to specify page number may be system generated for references.
POS	POSIon	Position of inferiors and superiors.
POSF	POSIon of the First suffix	Used to specify the position of the first suffix attribute of tensors.
REFID	REFerence IDentification	Used to identify various formula references.
SPC	SPaCing	Spacing of elements
STYLE	STYLE	Used to define the style of a character, for example, double fence.
SUFFIX	SUFFIX	Used to identify suffixes of tensors.
TYPE	TYPE	Used to define the type of character used, for example, brace fence.

SGML TAGS: DESCRIPTION AND USAGE

These tags are taken from: ISO Technical Report ISO/IEC/TR 9573:1988(E) - *Information processing - SGML support facilities - Techniques for using SGML*. In particular, section 8 - Mathematics. The layout and some examples are different. Due acknowledgement is given to the ISO document.

FORMULA AND FORMULA REFERENCE

51. <F> : inline Formula

This indicates an inline mathematical formula. An end tag is required.

Required Attribute(s):
None

Optional Attribute(s):
None

HANDBOOK ON INDUSTRIAL PROPERTY INFORMATION AND DOCUMENTATION

Ref.: Standards -- ST.32

page: 3.32.65

DTD Syntax:

```
<!ELEMENT f  - - (%formel;)+  -(br|matrix|pile|frac|mark|markref) -- In-line formula  
-->
```

Example:

... the basic assumption is that $2 \times 2 = 4$
and therefore ...

... the basic assumption is that <F> $2 \times 2 = 4$ </F> and therefore ...

Note: In simple cases such as this the use of SGML tags is not mandatory since the formula can be keyed, printed, etc., as part of the text stream. Nevertheless, markup is recommended for purposes of searching.

In addition it is recommended that <F> be used sparingly since if multi-level formulae are tagged as such later processing (display, printing) may be difficult or create awkward line spacing in the application. For these reasons the DTD has been modified to allow only certain constructs within the <F> tag.

52. <DF> : Display Formula

This indicates the beginning of displayed (set off from the text) mathematical formula(e). An end tag is required.

Required Attribute(s):

None

Optional Attribute(s):

ALIGN= The alignment attribute takes one of the values left, right, centre. Left is the default value.

ID= A unique name, which must start with a letter, eg. id=xyz.

NUM= Used to specify an explicit formula number. If omitted, sequential numbering of the formulae would normally be performed by the text formatter.

DTD Syntax:

```
<!ELEMENT df  - - (%formel;)+  -(br)          -- Display formula      -->  
<!ATTLIST df align (%align;) "centre"        -- Alignment           -->  
      id     ID      #IMPLIED                 -- Display formula id   -->  
      num    CDATA   #IMPLIED                 -- Display formula number -->
```

HANDBOOK ON INDUSTRIAL PROPERTY INFORMATION AND DOCUMENTATION

Ref.: Standards -- ST.32

page: 3.32.66

Example:

$$n^2 = G.d/D^2 = G_2.t/(D.p^2) \quad (1)$$
$$<DF NUM=(1)>n² = G.d/D<SUP>$$
$$2</SUP> = G₂.t/(D.p<SUP>2$$
$$</SUP>)</DF>$$

53. <DFG> : Display Formula Group

This indicates a group of displayed (set off from the text) mathematical formula(e) that are to be processed together. An end tag is required.

Required Attribute(s):

None

Optional Attribute(s):

ALIGN=	The alignment attribute takes one of the values left, right, centre. Left is the default value.
ID=	A unique name, which must start with a letter, eg. id=xyz.
NUM=	Used to specify an explicit formula number for the group.

DTD Syntax:

```
<!ELEMENT dfg - - (df+)
<!ATTLIST dfg align (%align;) "centre"           -- Display formula group      -->
                id      ID      #IMPLIED          -- Alignment                  -->
                num     CDATA   #IMPLIED          -- Display formula group id  -->
                                         -- Display formula group num -->
```

Examples:

NUM= Used to specify an explicit formula number for the group.

DTD Syntax:

```
<!ELEMENT dfg - - (df+)
<!ATTLIST dfg align (%align;) "centre"           -- Display formula group      -->
                id      ID      #IMPLIED          -- Alignment                  -->
                num     CDATA   #IMPLIED          -- Display formula group id  -->
                                         -- Display formula group num -->
```

HANDBOOK ON INDUSTRIAL PROPERTY INFORMATION AND DOCUMENTATION

Ref.: Standards -- ST.32

page: 3.32.67

Examples:

$$n^2 = G \cdot d/D^2 = G_2 \cdot t/(D \cdot p^2)$$

$$x^2 = H \cdot d/D^2 = G_2 \cdot t/(E \cdot p^2)$$

$$y^2 = J \cdot d/D^2 = G_2 \cdot t/(F \cdot p^2)$$

```
<DFG NUM=(1)><DF>n<SUP>2</SUP> =
G.d/D<SUP>2 </SUP> =
G<SUB>2</SUB>.t/(D.p<SUP>2</SUP>)</DF>
<DF>x<SUP>2</SUP> = H.d/D<SUP>2</SUP> = G
<SUB>2</SUB>.t/(E.p<SUP>2</SUP>)</DF><DF>y
<SUP>2</SUP> = J.d/D<SUP>2</SUP> = G<SUB>2
</SUB>.t/(F.p<SUP>2</SUP>)</DF></DFG>
```

$$n^2 = G \cdot d/D^2 = G_2 \cdot t/(D \cdot p^2) \quad (1a)$$

$$x^2 = H \cdot d/D^2 = G_2 \cdot t/(E \cdot p^2) \quad (1b)$$

$$y^2 = J \cdot d/D^2 = G_2 \cdot t/(F \cdot p^2) \quad (1c)$$

```
<DFG><DF NUM=(1a)>n<SUP>2</SUP> = G.d/D
<SUP>2</SUP> = G<SUB>2</SUB>.t/(D.p<SUP>2
</SUP>)</DF><DF NUM=(1b)>x<SUP>2</SUP> =
H.d/D<SUP>2</SUP> =
G<SUB>2</SUB>.t/(E.p<SUP>2 </SUP>)</DF><DF
NUM=(1c)>y<SUP>2</SUP> =
J.d/D<SUP>2</SUP> =
G<SUB>2</SUB>.t/(F.p<SUP>2
</SUP>)</DF></DFG>
```

54. <DFREF> : mathematical Formula REference

This indicates a formula reference, or formula group reference, within text phrases. It refers to an identified formula (see <DF> and <DFG> above). The tag is self-contained and therefore there is no end tag.

Required Attribute(s):

REFID= A unique name, which must start with a letter, eg. id=xyz.

Optional Attribute(s):

PAGE= The page number attribute can take the values yes and no, in the first case, which is the default, the appropriate page number, supplied by the system, is added to the reference.

DTD Syntax:

```
<!ELEMENT dfref - o EMPTY
<!ATTLIST dfref refid IDREF #REQUIRED
      page (yes|no) "yes"
      -- Formula reference
      -- Formula id
      -- Page number
      -->
      -->
      -->
```

HANDBOOK ON INDUSTRIAL PROPERTY INFORMATION AND DOCUMENTATION

Ref.: Standards -- ST.32

page: 3.32.68

Example:

$$n^2 = G \cdot d / D^2 = G_2 \cdot t / (D \cdot p^2) \quad [12]$$

.....

An example is shown on page 15

<DF ID="Math12"
NUM=[12]>n² = G₂ · t / (D · p²)</DF>

An example is shown on <DFREF

REFID="Math12"> ...

Note: on processing the page number of
the reference may be generated.

FORMULA CONTENT

55. <MARK> : MARK

This indicates a position for vertical alignment within a formula. In many cases, for example when aligning multiple formulae on equal signs, marking and referring to a horizontal position is required. The mark tag is used to define a mark. It is self-contained and therefore no end tag is necessary.

Required Attribute(s):

ID= The required identifier attribute is used when referring to a mark and must be unique.

Optional Attribute(s):

None

DTD Syntax:

```
<!ELEMENT mark - o EMPTY
<!ATTLIST mark id ID #REQUIRED
-- Mark for alignment
-- Reference id for the mark -->
```

Examples:

See <MARKREF> below

56. <MARKREF> : MARK REference

This indicates a reference to a defined mark and causes the system to vertically align the formula horizontally on that mark. The appropriate value for the reference identifier attribute (refid=) must be provided. The tag is self-contained, ie. it has no content, therefore, no end tag is necessary.

Required Attribute(s):

REFID= The identifier for the mark to which reference is made.

Optional Attribute(s):

None

HANDBOOK ON INDUSTRIAL PROPERTY INFORMATION AND DOCUMENTATION

Ref.: Standards -- ST.32

page: 3.32.69

DTD Syntax:

```
<!ELEMENT markref - o EMPTY                                -- Reference to a mark      -->
<!ATTLIST markref refid IDREF #REQUIRED                  -- Id of the mark referred to -->
```

Example:

$\begin{aligned} z &= x + 6y - 3 + 12x - 3y \\ &= x + 3y - 3 + 12x \\ &= 13x + 3y - 3 \end{aligned}$	$\begin{aligned} <\text{DF}> Z <\text{MARK ID=x}> = x + 6y - 3 + 12x - 3y </\text{DF}> \\ <\text{DF}> <\text{MARKREF REFID=x}> 8y - 12 </\text{DF}> \\ <\text{DF}> <\text{MARKREF REFID=x}> y - 3 </\text{DF}> \end{aligned}$
--	---

57. <BREAK> : BREAK

This indicates that a line break occurred at this point in a formula. The type attribute (type=) with values optional or required indicates if the break point is to be considered an optional breakpoint, and thus similar to hyphenating words, or a mandatory break. The latter is the default. Since the tag has no content an end tag is not required.

Required Attribute(s):

None

Optional Attribute(s):

TYPE= The type of break - required or optional. Required is the default.

DTD Syntax:

```
<!ELEMENT break - o EMPTY                                -- break point in formula      -->
<!ATTRIBUTE break type (required|optional) "required" -- type of break      -->
```

58. <BOX> : BOXes

This indicates parts of a formula to be placed in a box. An end tag is required.

Required Attribute(s):

None

Optional Attribute(s):

STYLE= Style attribute - see <OV> below, default is a single line.

DTD Syntax:

```
<!ELEMENT box - - (%formel;)+                                -- Box around a formula      -->
<!ATTLIST box style (%style;) "single"                   -- Box line styles      -->
```

Example:

$a + b$	$\text{} a + b \text{<}/BOX>$
---------	-------------------------------

HANDBOOK ON INDUSTRIAL PROPERTY INFORMATION AND DOCUMENTATION

Ref.: Standards -- ST.32

page: 3.32.70

59. <ov> : 'OVer' embellishments

This identifies parts of a formula where special accents or diacritical marks may be placed: over, mid or below data. In general text use <O> or <U>. An end tag is required.

Required Attribute(s):

None

Optional Attribute(s):

POS= The position attribute defines the position of the mark and takes one of the values: above, below or mid. The default value is above.

STYLE= The style attribute defines the style of the mark. It takes one of the values: single, double, triple, dash, dots, or bold. The default value is single.

TYPE= The type attribute defines the type of the mark to be used. It takes one of the values: dot, dotdot, dot3, dot4, tie, tiebrace, hat, hacek, acute, grave, cedil, ring, macron, ogonek, dblac, breve, tilde, vec, rvec, dyad, circle, caret, prime, dprime, plus, bar, none. The default value is bar.

Note: Not all combinations of type and style attribute values would normally be used, eg type=tilde, style=dots.

DTD Syntax:

```
<!ELEMENT ov - - (%formel;)+ -- 'over' embellishments -->
<!ATTLIST ov pos (above|below|mid) "above" -- position --
                  type (%type;)      "bar"   -- type of embellishment --
                  style(%style;)     "single" -- style -->
```

Example:

x + y

<ov>x + y</ov>

HANDBOOK ON INDUSTRIAL PROPERTY INFORMATION AND DOCUMENTATION

Ref.: Standards -- ST.32

page: 3.32.71

60. <TENSOR> : TENSOrs

This indicates a tensor in a formula. An end tag is required.

Required Attribute(s):

SUFFIX= The suffix attribute takes the suffixes of the tensor; a space indicating a switch from superscript to subscript or subscript to superscript.

Optional Attribute(s):

POSF= The value of the position of the first suffix attribute takes the value sup or sub, sup being the default.

DTD Syntax:

```
<!ELEMENT tensor - - (%formel;)+ -- tensors -->
<!ATTLIST tensor posf (sub|sup) "sup" -- position of the suffix --
suffix CDATA #REQUIRED -- value of the first suffix -->
```

Example:

$A^i_j{}^k = g^{ip}g^{kq}A_{pj}{}_q$

```
<TENSOR SUFFIX="i j k">A</TENSOR>
= <TENSOR SUFFIX="ip">g </TENSOR><TENSOR
SUFFIX="kq">g</TENSOR><TENSOR POSF=SUB SUFFIX="pj q"
">A</TENSOR>
```

61. <ITALIC> : ITALIC <ROMAN> : ROMAN

These indicate parts of a formula to be set in italic or roman, contrary to common practice and not being a function name. End tags are required.

Required Attribute(s):

None

Optional Attribute(s):

None

DTD Syntax:

```
<!ELEMENT italic - - (%formel;)+ -(italic) -- Italic -->
<!ELEMENT roman - - (%formel;)+ -(roman) -- Roman -->
```

Example:

$x + y = a^2$ $\langle F \rangle x + y = <ITALIC>a²</ITALIC></F>$

62. <FRAC> : FRACTIONS

This indicates fractions. The alignment of numerator and denominator is centered by default. Note that the ISO numerator tag <numer> can be omitted since the element is required.

HANDBOOK ON INDUSTRIAL PROPERTY INFORMATION AND DOCUMENTATION

Ref.: Standards -- ST.32

page: 3.32.72

An end tag is required.

Required Attribute(s):

None

Optional Attribute(s):

ALIGN= Indicates the alignment of the numerator and/or denominator, which may be centre, left, right - centre is the default.

DTD Syntax:

```
<!ELEMENT frac  - - ((%formel;)+, over)          -- Fraction numerator      -->
<!ATTLIST frac align (%align;) "centre"           -- Fraction alignment      -->
```

Example: (See below)

63. <OVER> : OVER (fraction denominator)

This identifies a fraction denominator. No end tag is necessary.

Required Attribute(s):

None

Optional Attribute(s):

None

DTD Syntax:

```
<!ELEMENT over  - o ((%formel;)+)                -- Fraction denominator      -->
```

Examples:

$$\frac{2x}{3xy}$$

```
<DF><FRAC>2x<OVER>3xy</FRAC></DF>
```

$$\frac{2x + 3y^2}{12x - 12y}$$

```
<DF><FRAC>2x + 3y<SUP>2</SUP><OVER>12x - 12y</FRAC></DF>
```

$$\frac{1}{1 + \frac{1}{y^2}}$$

```
<DF><FRAC>1<OVER>1+<FRAC>1<OVER>y<SUP>2</SUP></FRAC> </FRAC> </DF>
```

$$\frac{1}{1 + \frac{1}{y^2}}$$

```
<DF><FRAC ALIGN=L>1<OVER>1+<FRAC>1<OVER>y<SUP>2</SUP></FRAC> </FRAC></DF>
```

HANDBOOK ON INDUSTRIAL PROPERTY INFORMATION AND DOCUMENTATION

Ref.: Standards -- ST.32

page: 3.32.73

64. <SUP> : SUPerscript

This indicates a mathematical superior placed as a superscript. Several levels are allowed. An end tag is required.

Note: In cases where the optional attribute, `POS=`, is NOT used, the position of superscript, whether following or preceding the base character, can be determined by where the `<SUP>` is placed in the text (see examples below).

Required Attribute(s):

None

Optional Attribute(s):

`POS=` The position attribute takes one of the values `pre`, `mid`, or `post`.
The default is `post`.

DTD Syntax:

```
<!ELEMENT sup      - - (%formel;)+          -- Superscript           -->
<!ATTLIST (sup|sub) pos (PRE|MID|POST) "POST"    -- Position (default post)   -->
```

Examples:

e^x `e^x`

$x-yN$ `^{x-y}N` or `N^{x-y}`

See further examples below.

65. <SUB> : SUBscript

This indicates a mathematical inferior placed as a subscript. Several levels are allowed. An end tag is required. See notes at `<SUP>` above.

Required Attribute(s):

None

Optional Attribute(s):

`POS=` The position attribute takes one of the values `pre`, `mid`, or `post`. The default is `post`.

DTD Syntax:

```
<!ELEMENT sub      - - (%formel;)+          -- Subscript            -->
<!ATTLIST (sup|sub) pos (PRE|MID|POST) "POST"    -- Position (default post)   -->
```

Examples:

HANDBOOK ON INDUSTRIAL PROPERTY INFORMATION AND DOCUMENTATION

Ref.: Standards -- ST.32

page: 3.32.74

T₁¹ T¹₂

E^x² E^x²</sup>

2ⁿ₁ 2ⁿ₁</sup>

E^a₂¹ E^a¹₂</sup>

Using the hairspace character entity reference it is possible to indicate a staggered arrangement:

T₁²₃ <df>T₁ ² ₃</df>

66. <PILE> : PILEs

This indicates segments of a formula that are to be placed one above the other. The <PILE> tag is immediately followed by an implied "above1" element, specification of which is not required, (ISO: "where both the start and end tags can and should be omitted). This is followed by one or more above elements, where the start tag is required. Alignment is to centre by default. An end tag is required.

Required Attribute(s):

None

Optional Attribute(s):

ALIGN= Indicates the alignment of values which are centered by default.

SPC= Indicates the spacing between elements, close or normal. Normal is the default.

67. <ABOVE> : ABOVE

This indicates a formula value to be displayed above another formula value. An <ABOVE> tag can be used as many times as necessary to achieve the required stacking of formula values. An above can occur within columns, in a matrix (see below), and piles. No end tag is necessary.

Required Attribute(s):

None

Optional Attribute(s):

None

DTD Syntax:

```
<!ELEMENT pile  - - ((%formel;)+,above+)
<!ATTLIST pile  spc  (NORM | CLOSE) "NORM"
                  align (%align;) "centre"
<!ELEMENT above  - o  ((%formel;)+)                                -- Top element, above+      -->
                                         -- Spacing                      -->
                                         -- Alignment                     -->
                                         -- Lower layers                 -->
```

HANDBOOK ON INDUSTRIAL PROPERTY INFORMATION AND DOCUMENTATION

Ref.: Standards -- ST.32

page: 3.32.75

Example:

a
b
c

<PILE>**a**<ABOVE>**b**<ABOVE>**c**</PILE>

68. <FENCE> : FENCES

This indicates fences (brackets), which may be of variable size. An end tag is required.

Required Attribute(s):

None

Optional Attribute(s):

TYPE= Type of fence, for opening and closing constructs, which may be one of the following:

(paren	(Default)
[bracket	
{	brace	
	bar	
<	angbrack	
/	solidus	
	none	

STYLE= Style of the fence. It takes one of the values: single, double, triple, dash, dots or bold. The default value is single.

CLOSE=character Specifies a character that is to be displayed as a closing fence on the right end of the data. Any value for the type attribute is ignored.

OPEN=character Specifies a character that is to be displayed as an opening fence on the left end of the data. Any value for the type attribute is ignored.

DTD Syntax:

```
<!ELEMENT fence  - - (%formel;)+          -- Brackets. parentheses etc. -->
<!ATTLIST fence type (%fencety;) "paren"   -- Fence kind code      --
                      style(%style;) "single"    -- Line styles           --
                      open   CDATA #IMPLIED    -- Special open char     --
                      close  CDATA #IMPLIED    -- Special close char    -->
```

Examples:

$$\left\{ \frac{2x + 3y^2}{[12x - 12y] \times 14.5} \right\}$$

<FENCE TYPE=BRACE><FRAC>2x +
3y²<OVER><FENCE TYPE=BRACKET>12x -
12y</FENCE>x 14.5</FRAC></FENCE>

$$\left| \begin{matrix} A + 1 \\ B \end{matrix} \right|$$

<FENCE TYPE=BAR STYLE=DOUBLE><FRAC>A
+1<OVER>B</FRAC></FENCE>

$$\left[\begin{matrix} a \\ b \end{matrix}, 1 \right]$$

<FENCE OPEN="(" CLOSE=")"><FRAC>a<OVER>b</FRAC>,1</FENCE>

HANDBOOK ON INDUSTRIAL PROPERTY INFORMATION AND DOCUMENTATION

Ref.: Standards -- ST.32

page: 3.32.76

69. <MIDDLE> : MIDDLE (post)

This indicates a single separator mark called a "post" in a formula. The <MIDDLE> tag is used with the fence tag to separate values within a fence. An end tag is necessary.

Required Attribute(s):

None

Optional Attribute(s):

STYLE= Style of the post. See above for style attributes. The default is a single post.

DTD Syntax:

```
<!ELEMENT middle - - (#PCDATA)          -- Middle of a space      -->
<!ATTLIST middle style (%style;) "single"    -- Line styles        -->
```

Example:

$$\left(\frac{df}{dx}(y) \right)_{x=0}$$

```
<FENCE><FRAC>df<OVER>dx</FRAC>(y)<MIDDLE>|</MIDDLE>
<SUB>x=0</SUB></FENCE>
```

PLEXES

70. <PLEX> : PLEX and <OPERATOR>: OPERATOR

This indicates a formula to be presented in the style of a general limit operator. A plex must contain an operator as the first element. Specification of the operator tag <OPERATOR> is optional. The operator can be followed by from-operators (<FROM> tags) and to-operators (<TO> tags), as well as an of-operand (<OF> tag). See examples below. An end tag is required.

Required Attribute(s):

None

Optional Attribute(s):

None

DTD Syntax:

```
<!ELEMENT plex      - - (operator,(from?&to?)?,of?)   -- Generalized operator      -->
<!ELEMENT operator o o (#PCDATA)                      -- Operator symbol        -->
```

See below for examples.

HANDBOOK ON INDUSTRIAL PROPERTY INFORMATION AND DOCUMENTATION

Ref.: Standards -- ST.32

page: 3.32.77

Note: The sum, integral, and product elements are special cases of the general plex, the operator being implied by these tags, for which see below.

71. <SUM> : SUMmation

This indicates a formula to be displayed as a summation, using the limit form of presentation. An end tag is required.

Required Attribute(s):

None

Optional Attribute(s):

None

DTD Syntax:

```
<!ELEMENT sum    - - ((from?&to?)?,of?)           -- Summation      -->
```

72. <INTEGRAL> : INTEGRAL

This indicates information to be displayed as an integral, using the limit form of presentation. An end tag is required.

Required Attribute(s):

None

Optional Attribute(s):

None

DTD Syntax:

```
<!ELEMENT integral - - ((from?&to?)?,of?)        -- Integral       -->
```

73. <PRODUCT> : PRODUCT

This indicates a formula that presents the product of formula values using the limit form of presentation. An end tag is required.

Required Attribute(s):

None

Optional Attribute(s):

None

DTD Syntax:

```
<!ELEMENT product - - ((from?&to?)?,of?)        -- Product       -->
```

74. <FROM> : Operator for "limits"

This identifies the lower limit for the <INTEGRAL>, <PLEX>, <PRODUCT> and <SUM> tags. No end tag is required.

HANDBOOK ON INDUSTRIAL PROPERTY INFORMATION AND DOCUMENTATION

Ref.: Standards -- ST.32

page: 3.32.78

Required Attribute(s):

None

Optional Attribute(s):

None

DTD Syntax:

```
<!ELEMENT from - o (%formel;)+ -- Start index for operator -->
```

75. <OF> : Operator for "limits"

This identifies the operand for the <INTEGRAL>, <PLEX>, <PRODUCT> and <SUM> tags. No end tag is required.

Required Attribute(s):

None

Optional Attribute(s):

None

DTD Syntax:

```
<!ELEMENT of - o (%formel;)+ -- Formula operated upon -->
```

76. <TO> : Operator for "limits"

Identifies the upper limit for the <INTEGRAL>, <PLEX>, <PRODUCT> and <SUM> tags. No end tag is required.

Required Attribute(s):

None

Optional Attribute(s):

None

DTD Syntax:

```
<!ELEMENT to - o (%formel;)+ -- End index for operator -->
```

Examples:

$$\bigcup_{i=1}^{10} a_i$$

<PLEX>U<FROM>i=1<TO>10<OF>a_i</PLEX>

$$\sum_{i=1}^{10} a_i$$

<SUM><FROM>i=1<TO>10<OF>a_i</SUM>

HANDBOOK ON INDUSTRIAL PROPERTY INFORMATION AND DOCUMENTATION

Ref.: Standards -- ST.32

page: 3.32.79

77. <SQRT> : SQuare Root

This indicates a square root. An end tag is required.

Required Attribute(s):

None

Optional Attribute(s):

None

DTD Syntax:

```
<!ELEMENT sqrt - - (%formel;)+ -- Square root -->
```

Example:

$\sqrt{a+b}$ <SQRT>a+b</SQRT>

78. <SQUARE> : SQUARE

This indicates data to be displayed as a square. An end tag is required.

Required Attribute(s):

None

Optional Attribute(s):

None

DTD Syntax:

```
<!ELEMENT square - - (%formel;)+ -- Square -->
```

Example:

$(a + b)^2$ <SQUARE>a+b</SQUARE>

79. <ROOT> : ROOT

This indicates data to be displayed as a root. A root must contain a degree and an of-operand (<OF> tag, see above). The degree of the root may be tagged <DEGREE> but it is recommended NOT to do so in patent documents. An end tag is required.

Required Attribute(s):

None

Optional Attribute(s):

None

HANDBOOK ON INDUSTRIAL PROPERTY INFORMATION AND DOCUMENTATION

Ref.: Standards -- ST.32

page: 3.32.80

DTD Syntax:

```
<!ELEMENT root  - - ((%formel;)+,of)          -- Root: degree/of           -->
```

Example:

 $\sqrt{a+b}$ $\sqrt[b]{x+y}$

```
<ROOT>4<OF>a+b</ROOT> <ROOT>a+b<OF>x+y</ROOT>
```

80. <POWER> : POWER

This indicates an exponential formula. A power must contain a degree and an of-operand (<OF> tag, see above). The degree element must occur before the of-operand. The degree of the power may be tagged <DEGREE> but it is recommended NOT to do so in patent documents. An end tag is required.

Required Attribute(s):

None

Optional Attribute(s):

None

DTD Syntax:

```
<!ELEMENT power - - ((%formel;)+,of)          -- Power: degree/of           -->
```

Example:

 $(a + b)^4$ $(x + y)^{a+b}$

```
<DF>
<POWER>4<OF>a+b</POWER><POWER>a+b<OF>x+y</POWER>
</DF>
```

81. <VEC> : VECtors

This indicates a vector in a formula. By convention these are set in bold roman or medium italic with an arrow above. An end tag is required.

Required Attribute(s):

None

Optional Attribute(s):

None

HANDBOOK ON INDUSTRIAL PROPERTY INFORMATION AND DOCUMENTATION

Ref.: Standards -- ST.32

page: 3.32.81

DTD Syntax:

```
<!ELEMENT vec      - - (%formel;)+          -- Designates vector name    -->
```

Example:

→
V <VEC> V </VEC>

82. <MATRIX> : MATRices

This indicates a matrix formula. A matrix is different from a pile because the information is organised into rows as well as columns. The `<MATRIX>` tag is immediately followed by a column tag `<COL>` (see below). An end tag is required.

Required Attribute(s):

None

Optional Attribute(s):

Option
None

83. <col> : **COL**umn(s) in a matrix

This indicates a column in a matrix. The `<COL>` tag is immediately followed by an implied `above1` element, specification of which is not required. This is followed by one or more `above` elements, where the start tag `<ABOVE>` is required. Alignment is to center by default. An end tag is required.

Required Attribute(s):

Required
None

Optional Attribute(s):

ALIGN= Indicates the alignment of the values within the column. Centre is the default.

DTD Syntax:

```
<!ELEMENT matrix - - (col+)

CITATIONS, NAMES AND ADDRESSES

84. These tags may occur within any patent sub-documents, except drawings. In bibliographic data, <SDOBI>, they can occur within tags <B400>, <B560>, <B600>, <B700>, <B861>, <B871> and <B891>. In abstracts <SDOAB>, description <SDODE> and claims <SDOCL> they occur mainly as bibliographic citations within paragraphs. In Search Reports, <SDOSR>, they are combined with bibliographic tags to give citations to data searched. Examples are given for each type of data in Annex D.
85. The tags below are based on two sources:
- 1) European Workgroup on SGML. *MAJOUR: modular application for Journals*. European Workgroup on SGML (EWS), 1991.
 - 2) Association of American Publishers. Electronic Manuscript Series : *Author's guide to electronic manuscript preparation and markup*; Reference manual on electronic manuscript preparation and markup. Dublin, Ohio : Electronic Publishing Special Interest Group (EPSIG), 1989.

Due acknowledgement is given to these sources.

page: 3.32.86

PART 2: SGML MARKUP FOR PATENT BIBLIOGRAPHIC DATA

86. This part of the Recommendation provides SGML tags for all bibliographic fields identified in WIPO Standards ST.9 and ST.30. In doing so some inconsistencies and omissions in WIPO Standards ST.9 and ST.30 had to be resolved.
87. INID codes will be used, where available, as the basis of the generic identifiers for the SGML markup start tags. To conform to SGML rules, which do not allow pure numerics as generic identifiers, numeric tags will be preceded by a "B".
88. An attempt has been made to identify all common data elements which may be present in bibliographic data relating to patent documents - typically all data appearing on the title page of patents and/or data required for electronic data exchange. It is realised that this is a difficult task. In order to meet any particular requirement of a patent office not contained in the tags below two courses of action are proposed:
 - 88.1. In the tags beginning <B000> to <B099> these tags are reserved for Office specific tags which do not fit logically into any other numerical area. In addition, if used, these tags should end with the two letter ST.3 code of the country or organisation using the tag, eg. <B050EP>. The DTD should be changed to add any new tags, any receiving office notified that these tags have been added to and, ideally, WIPO should be notified in order that future revisions may include the proposed tag(s). The DTD indicates that this data is optional.
 - 88.2. In the tags beginning <B100> to <B999>, defined below, it is possible to indicate Office specific tags which fit logically into an existing numerical range. However, if used, these additional tags should end with the two letter ST.3 code of the country or organisation using the tag, eg. <B578US>. The DTD should be changed to add any new tags, any receiving office notified that these tags have been added and, ideally, WIPO should be notified in order that future revisions may include the proposed tag(s). The list of tags below contains examples of EPO, JPO and USPTO tags which fall into this category. These are included as examples only and need not form part of the DTD.
89. An example of the markup of bibliographic data can be found in Annex D.

PATENT BIBLIOGRAPHIC DATA

TABLE OF SGML TAGS FOR BIBLIOGRAPHIC DATA				
INID	Bibliographic tag		Content	Description
	B000			Office Specific System/File Information
	EPTAGS			EPO-specific tags
		B001EP	#PCDATA	Selective mask for states involved
		B002EP	#PCDATA	Reserved
		B003EP	#PCDATA	Indicator 'no A-doc pub. by EPO'
		B004EP	#PCDATA	Re-establishments of rights indicator
		B005EP	#PCDATA	Printer identification
		B006EP	#PCDATA	Indicator for international applications
		B010EP	#PCDATA	Other rights and legal means of execution
		B011EP	(date, dnum, ctry)	Serial number, date and states
		B020EP	CDATA	Data concerning bibliographic record creation
		B021EP	CDATA	Data concerning bibliographic record correction(s)
		B030EP	CDATA	Legal status data
		B050EP		Free text data
			B051EP #PCDATA	Language
			B052EP #PCDATA	Text
		B053EP	#PCDATA	Remarks
		B060EP	CDATA	Receipt of documents data, check data for electronic filing
		B061EP	CDATA	Data relating to fees, financial information
		B070EP	#PCDATA	B Publication technical field
		B078EP	#PCDATA	No opposition filed
	USTAGS			Placeholder for USPTO-specific tags
	JPTAGS			Placeholder for JPO-specific tags
	xxTAGS			Placeholder for other patent offices
10	B100			Document Identification
11	B110		#PCDATA	Number of the patent document, usually the publication number.
12	B120			Plain language designation
		B121	#PCDATA	Plain language designation of the kind of document, eg. European Patent Application
		B121EP	#PCDATA	Descriptive text for B121 (EPO)
13	B130		#PCDATA	Kind of document according to WIPO

page: 3.32.98

ANNEX A: SGML DECLARATION FOR PATENT DOCUMENTS

The ST.32 SGML Declaration below contains the reference concrete syntax to be applied when exchanging patent data in roman languages. It is not necessary, usually, to include this declaration and/or the DTD with the patent document data being exchanged. The declaration and the DTD, below, shall be deemed as the defaults for this purpose. It is stressed that the declaration may be modified, as required, for a particular language's character set, eg. for Russian or Japanese; or for particular parsers, etc.

If, for any reason, patent data is exchanged using a different character set then the receiving agent should be informed and the declaration modified accordingly. It is strongly advised that, for roman languages, this declaration should be the default since ISO 646 is processable by most systems; although extension, to ASCII 437, for example, may be an acceptable second level alternative.

```

ANNEX C: PATENT CHARACTER ENTITY REFERENCES (NON-ISO)

The following character entity references are referenced in the DTD above. This is a non-exhaustive list of entity references which may appear in patent documents - many more are possible, and, for data exchange, must be declared to receiving offices. The entity references below, plus the ISO entity references, allow all characters contained in WIPO Standard ST.31 to be included in a patent document instance.

<!-- (C) Special characters in Patent Information not in ISO. Permission to copy in any form is granted for use with conforming SGML systems and applications as defined in ISO 8879, provided this notice is included in all copies. -->

<!-- Character entity set. Naming and reference to this file may be system dependent.

Typical invocation:

```
<!ENTITY % PATSPEC SYSTEM "patspent.ent">
%PATSPEC;-->
<!ENTITY and      SDATA "[ang      ]" --Approx. but not actually equal to    -->
<!ENTITY dlowbar  SDATA "[dlowbar  ]" --Double underscore           -->
